

---

# Project Open Source in the Enterprise

*Report from Boston, July 2003*

# Attendees

---

- ❑ Michael Ostermann, Innenministerium Nordrhein-Westfalen
- ❑ Ileana Reisch, Mitre
- ❑ Hideki Kawahara, Toyota
- ❑ Hirokazu Narita, Fujitsu
- ❑ Michi Minoh, Kyoto University
- ❑ Seji Otani, Tepco Systems
- ❑ Todd Gamble, MCI
- ❑ Larry M. Gunter, MSWC Dahlgren
- ❑ Dock Allen, Mitre
- ❑ Steve Nunn, The Open Group
- ❑ Walter Stahlecker, HP

# Prioritized list of work items

---

Priority	Topic
*****	Including Open Source in your SW landscape
*****	How to improve Reliability & Dependability of Open Source
***	Evangelization in Enterprises
**	Guide to understand the impact of different Open Source licenses
**	How to include Open Source into Enterprise IT Architecture
*	Best practices for releasing code under Open Source licensing
*	How to <b>Create</b> /Manage/Run an Open Source Project
*	How to Create/ <b>Manage</b> / <b>Run</b> an Open Source Project
*	How Enterprise IT People can Engage with Open Source Teams to make Effective Contributions
	an equivalent to the Emily Post guidebook - on Open Source Etiquette

# Work items described (1)

Topic	Content	Description
<p><b>Including Open Source in your SW landscape</b></p>	<ul style="list-style-type: none"> <li>❑ Standards for interfaces with Open Source SW</li> <li>❑ How does OSS interface with other elements in the current environment (interoperability, formats, licenses, security levels, electronic signatures, support/fixing)</li> <li>❑ Meet required functionality</li> <li>❑ Software development environment for Open Source SW</li> <li>❑ How does Open Source fit into current governance processes (policy, architects, management, finance)</li> <li>❑ Are there appropriate Open Source products? Are there consequential other changes to the landscape?</li> <li>❑ Viability of the “vendor” (community), longevity of product, source and process of support</li> <li>❑ Guidance on interoperability between different licensing domains</li> <li>❑ Training engineers to understand and analyze open source</li> <li>❑ Impact of Open Source on administration of operational environment</li> </ul>	<p><b>Characteristics:</b></p> <ul style="list-style-type: none"> <li>❑ Checklist of questions</li> <li>❑ Examples</li> <li>❑ Pointers to guides</li> </ul> <p><b>Form:</b></p> <ul style="list-style-type: none"> <li>❑ Paper</li> <li>❑ Online resource</li> <li>❑ Training course</li> </ul> <p><b>Project team:</b></p> <ul style="list-style-type: none"> <li>❑ Legally aware</li> <li>❑ IT architects</li> <li>❑ Budget owners for SW maintenance</li> <li>❑ IT operations (dept. mgr. and staff)</li> <li>❑ Development staff</li> <li>❑ Security specialists</li> <li>❑ Open Source developers</li> </ul>

# Work items described (2)

Topic	Content	Description
<b>How to improve Reliability &amp; Dependability of Open Source</b>	<ul style="list-style-type: none"> <li>❑ How to impact the community in order to effect change</li> <li>❑ Installing behavioral patterns leading to better code</li> <li>❑ Cost of such efforts, need to train in-house experts</li> <li>❑ Benefit of access to the source code (as opposed to proprietary binaries)</li> <li>❑ How to deal with the lack of SW assurance and documentation/training</li> <li>❑ Need to factor this into the overall cost/benefit analysis</li> <li>❑ Are Open Source testing levels above or below normal enterprise expectations for SW – can The Open Group help? Is there a registry of “certified” SW? What about version changes?</li> <li>❑ Understanding maintenance process of community (many support models, paths of interaction) – compile a list of major SW projects</li> <li>❑ Process to interact with communities for improving quality</li> </ul>	<p><b>Characteristics:</b></p> <ul style="list-style-type: none"> <li>❑ Lifecycle descriptions</li> <li>❑ Classification schemes</li> </ul> <p><b>Form:</b></p> <ul style="list-style-type: none"> <li>❑ Guide</li> <li>❑ Case studies</li> <li>❑ Certifications, classifications?</li> </ul> <p><b>Project team members:</b></p> <ul style="list-style-type: none"> <li>❑ Source selection teams</li> <li>❑ Legally aware</li> <li>❑ Testing</li> <li>❑ Competitive aspects in SW</li> <li>❑ Consultants</li> <li>❑ QA, insurance</li> <li>❑ Technical architecture</li> <li>❑ Open Source developers</li> </ul>

# Work items described (3)

Topic	Content	Description
<b>Evangelization in Enterprises</b>	<ul style="list-style-type: none"> <li>❑ List of benefits and drawbacks for decision makers (e.g. MGOSS)</li> <li>❑ Workshop materials (content, whom to invite)</li> <li>❑ National and local conferences or tutorials (train the trainers)</li> <li>❑ Need to follow up with in-house tutorials</li> <li>❑ Feedback to The Open Group's OSE project</li> <li>❑ Successful and failed examples</li> <li>❑ Business case (ROI, etc.)</li> </ul>	<p><b>Characteristics:</b></p> <p><b>Form:</b></p> <ul style="list-style-type: none"> <li>❑ Presentation</li> <li>❑ Differentiated workshops per audience</li> <li>❑ Channel to submit open questions</li> </ul> <p><b>Project team:</b></p> <ul style="list-style-type: none"> <li>❑ Project managers</li> <li>❑ People with assignment on Open Source</li> <li>❑ SW geeks</li> <li>❑ Legally aware</li> <li>❑ Procurement\Open Source developers</li> </ul>

# Work items described (4)

Topic	Content	Description
<b>Guide to understand the impact of different Open Source licenses</b>	<ul style="list-style-type: none"> <li>❑ Interpretation of key licenses for legally unaware people</li> <li>❑ Imperative to have an Open Source policy in the enterprise</li> <li>❑ What is a derivative product?</li> <li>❑ Can I change the license on a derivative product?</li> <li>❑ Mixing of licensing domains</li> <li>❑ How to deal with mixed products where open source functionality may migrate into proprietary licensing</li> </ul>	<p><b>Characteristics:</b></p> <p><b>Form:</b></p> <ul style="list-style-type: none"> <li>❑ Minimal free Open Source policy example</li> <li>❑ Guide</li> <li>❑ Presentation</li> </ul> <p><b>Project team:</b></p> <ul style="list-style-type: none"> <li>❑ Refer to existing papers (authors)</li> <li>❑ Legal track in OSE project</li> <li>❑ Ask previous presenters for suggestions</li> <li>❑ Open Source developers</li> </ul>

# Managers' Guide to Open Source SW

---

- ❑ Brief report (Dock Allen), followed by discussion
- ❑ A review draft is on the project web site  
[www.opengroup.org](http://www.opengroup.org) > Forums > Work areas > Open Source in the Enterprise > log in > Recent review documents  
  
[http://www.opengroup.org/ose/protected/upreviews/10/263/Managers\\_Guide\\_to\\_OSS\\_Draft\\_2003-05-08\\_Why\\_OSS\\_Matters.doc](http://www.opengroup.org/ose/protected/upreviews/10/263/Managers_Guide_to_OSS_Draft_2003-05-08_Why_OSS_Matters.doc)
- ❑ The guide is impartial towards Open Source
- ❑ It provides factual information and recommends a list of questions to be considered
- ❑ Review is open to all, decisions will be taken by The Open Group's membership

# Open Source methods to increase SW quality and dependability

---

- ❑ Presentation by Dock Allen
  - New ways are needed to get dependable SW at a much reduced cost compared to today
- ❑ Discussion points
  - Diversity inherent in the Open Source process is a plus
  - Need to collect case studies about immature management leading to premature releases and losses, and others which went well; introduce Open Source examples
  - Peer reviews are a strong point of Open Source methods
  - Open Source allows prolonged use of mature SW because the source is available
  - Pick the right SW project manager
  - Proposal: Set up a discussion track within the OSE project “how to work open source dependability issues”

# Next steps in the OSE project

---

- ❑ Complete ongoing work:
  - Review and publish Managers Guide to Open Source SW
  - Clarify rules of engagement
    - Open participation in discussions
    - Membership required for consensus formation
- ❑ Increase the rate of progress:
  - Publish the top 4 work items, including suggested types of participants
  - Ask OSE project members to find individuals to whom deliverables should be of interest
  - Establish sites for new work items
- ❑ Increase reach:
  - Set up regional conferences to raise awareness and attract contributors
    - Proposed venues: Hagen (Germany, Michael & Walter), Boston (Ileana & Dock), possibly Japan
  - Set up resource locator with sample agendas, presentations, etc. to help project members (and others) deal with Open Source in the Enterprise
