

Enterprise Architecture & Technology

Building A Service Oriented Infrastructure

Dr. Guy Bunker

Chief Scientist, Symantec Corporation

Agenda

- ▶ Driving Factors
- ▶ Complexity and the Data Center
- ▶ Moving to IT as a service
- ▶ Principles for architecture design
- ▶ Data and security convergence
- ▶ Risks and consequences
- ▶ Summary

Information Drives Our Businesses

- ▶ IT systems automate more of our business than ever
 - Automation of internal business process
 - Enabling new external business models
- ▶ The Internet offers unprecedented access to information
 - Credit reports, bank statements, health records
- ▶ More information than ever before
 - More information being generated
 - More information being accessed
- ▶ More regulations
 - Driving storage requirements
 - Driving access requirements

YOU ARE THE BUSINESS!
The Architecture Enables The Business

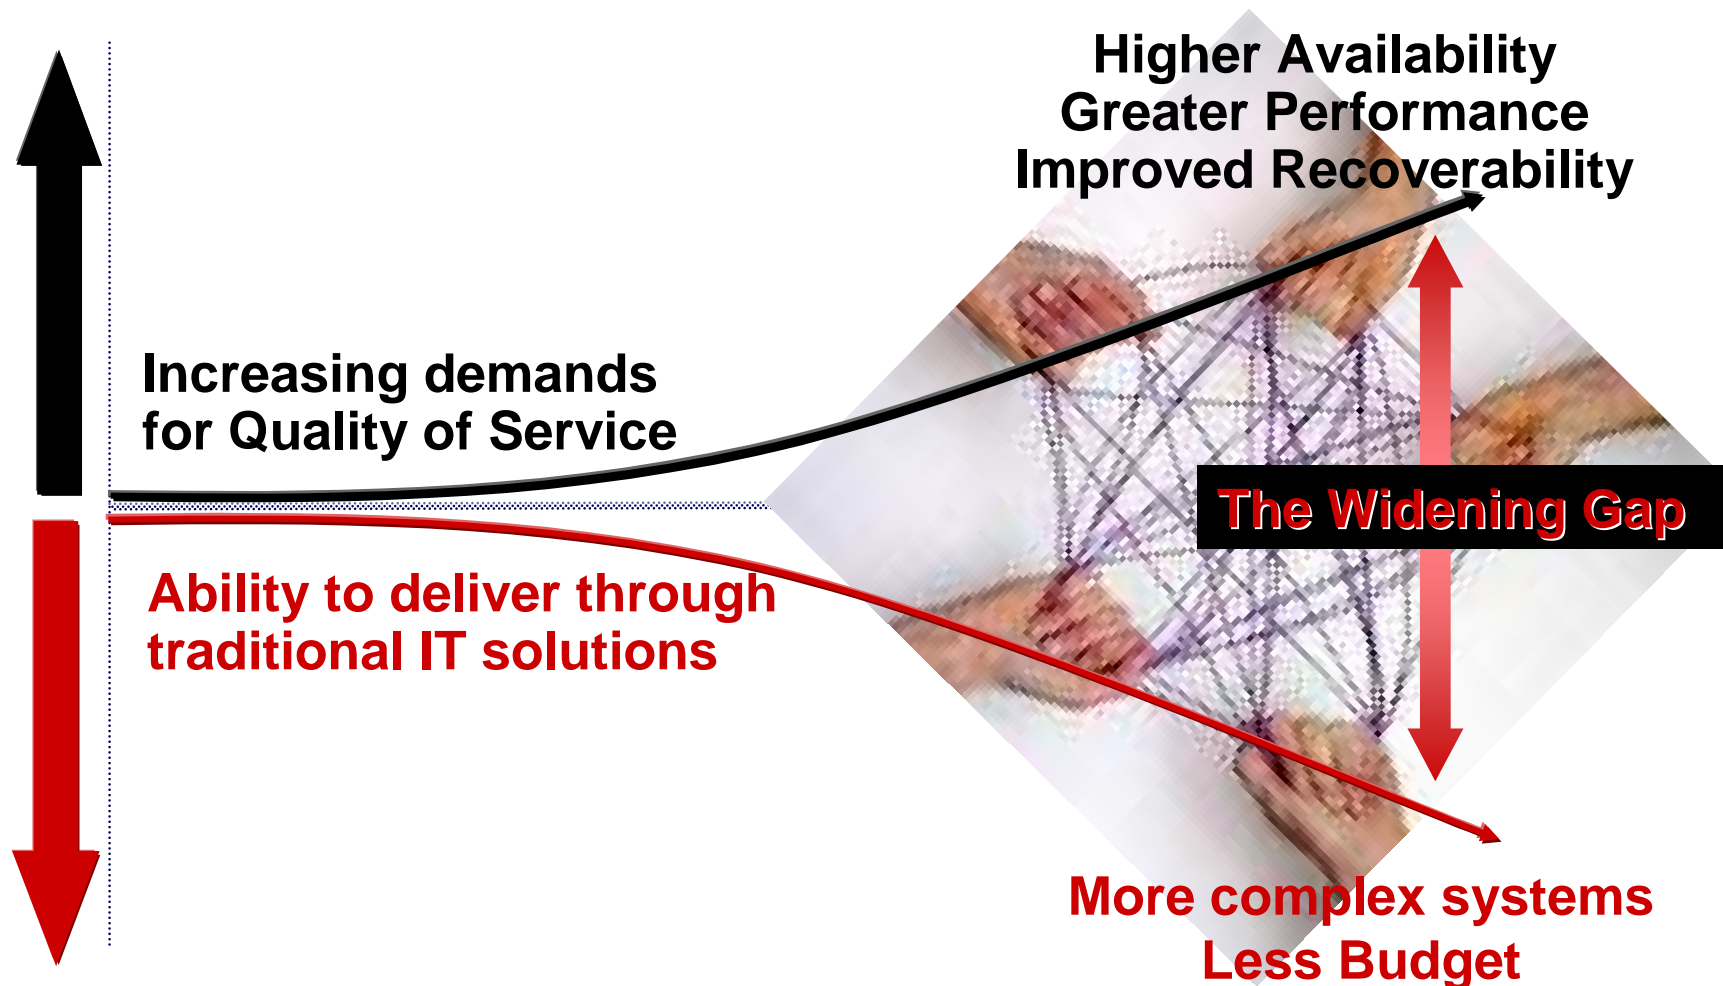

For The CIO, The Pressure's On.

**How often will you have to change your architecture?
At what cost?**

IT: The Challenge

One Goal: Master Complexity

Infrastructure Software In The Data Center: Developing A Service Oriented Infrastructure

Data Protection	Storage Management	Server Management	Application Performance	Security
<ul style="list-style-type: none"> Backup Media management Snapshot services Archiving / Compliance 	<ul style="list-style-type: none"> File system Volume management Copy services Multi-pathing Resource mgmt. 	<ul style="list-style-type: none"> Clustering App. placement Provisioning Configuration management 	<ul style="list-style-type: none"> Tuning advice Alerting Root cause analysis SLA reporting 	<ul style="list-style-type: none"> Firewall Anti-spam Anti-malware IP Leakage Compliance

Infrastructure Software In The Data Center: Developing A Service Oriented Infrastructure

Databases

Middleware

Applications

Data Protection	Storage Management	Server Management	Application Performance	Security					
NetWorker	Data Protector	ECC	Sun SRM	DLM	ServiceGuard	Altiris	AppManager	Vantage	McAfee
Galaxy	EDM	ApplQ	ReiserFS	LVM	Sun Cluster	ClusterFrame	OEM	PathFinder	MessageLabs
ArcServe	NT Backup	CreeksPath	SAN Navigator	SVM	MSCS	Polyserve	Patrol	Introscope	Zantaz
Media Mirror	OnTap	HiCommand	Aperi	ASM	HA-CMP	GeoSpan	Foglight	JProbe	MessageOne
DiskXtender	NetVault	TPM	ShadowImage	MDUX	TrueCluster	Qlusters	DBArtisan	Sitraka	BitDefender
EmailXtender	LiveVault	SAN Copy	InstantImage	SVC	IBM TPM / TIO	SteelEye	DGI	MOM	Postini
TSM	SyncSort	MirrorView	SnapView	LDM	BMC	Kickstart	Topaz	Performasur	IronMountain
SAM-FS	Retrospect	RepliStor	Shadow Copy	OCFS	HP OpenView	N1 Grid	CCMS	Tivoli	Microsoft
Data Migrator	Ultrabac	TrueCopy	FlashCopy	DFM	CA	HP UDC	PAC	Patrol	IronPort
RSS	Tapeware	DoubleTake	TimeFinder	UFS	Jumpstart	ADS, SMS	Optane	Corefirst	TrendMicro
NearStore	DLM	PPRC	Ext3	ZFS	Opware	Marimba	Silk	Appsight	Cisco
BrightStor		SRDF	SANFS	JFS	Bladologic		TheGuard		NetIQ
Mobile Backup		MPIO	PowerPath	GPFS	Tivoli		eHealth		Altiris

Network

SAP ORACLE Microsoft Custom Applications
Applications

Data Protection

Storage Management

Server Management

Application Performance

Security

**Standardization & Virtualization:
The Only Way To Win.**

Veritas NetBackup
Symantec Backup Exec,
Enterprise Vault

Veritas Storage Foundation

Veritas Server Foundation

Veritas i3—APM

Symantec Security Solutions

Network
NORTEL NETWORKS Juniper CISCO SYSTEMS BROCADE M-DATA

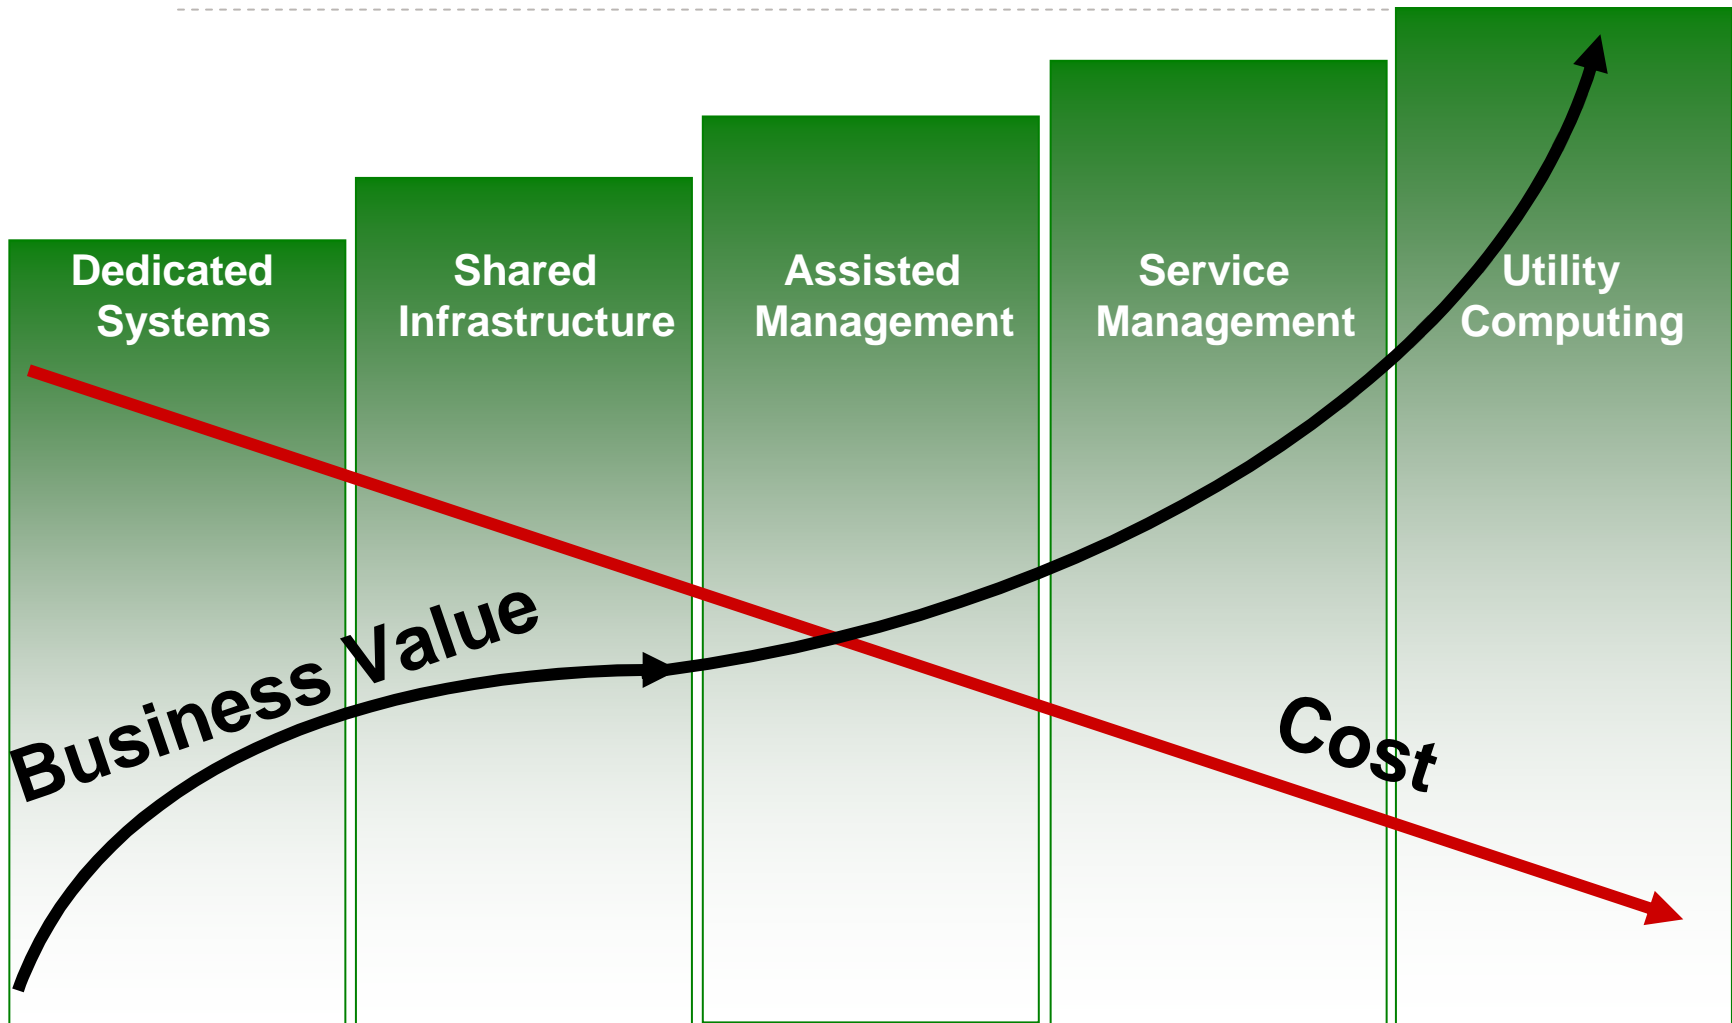

Storage
hp HITACHI IBM EMC NetworkAppliance

Servers
MIXL solaris Linux Windows hp

Virtual Machines
Xen vmware intel

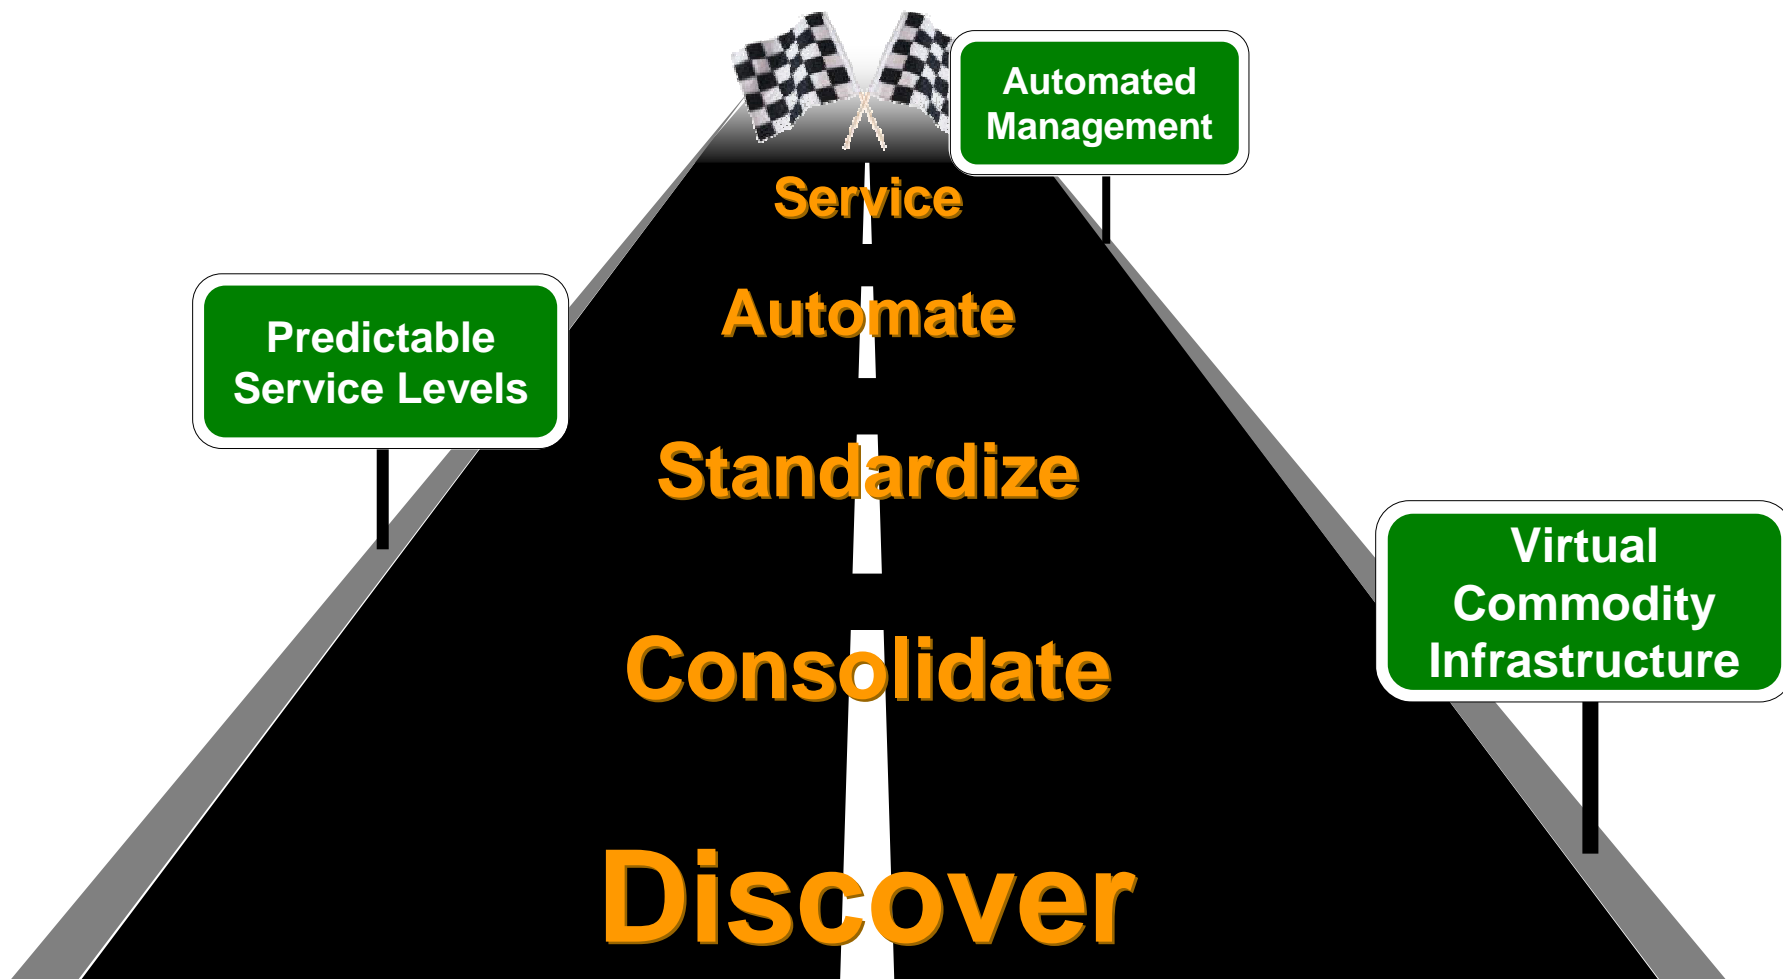

Architectural Maturity

Five Steps To Deliver IT As A Service

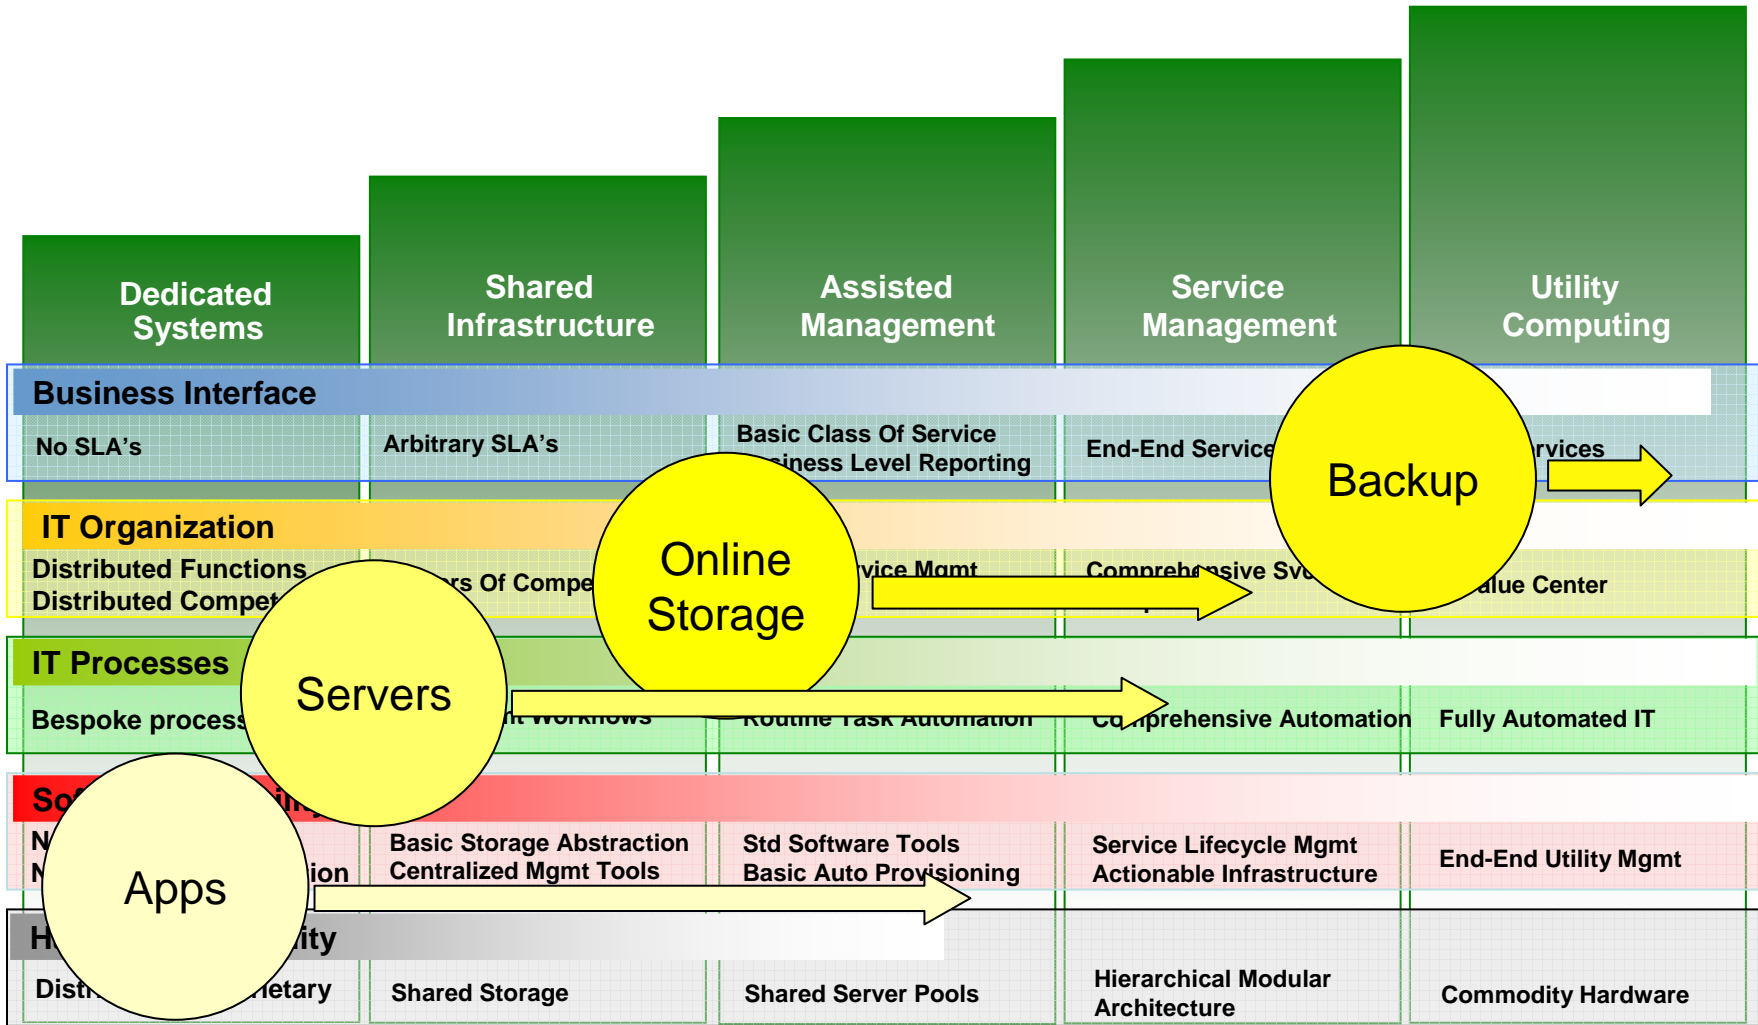

Architectural Maturity

	Dedicated Systems	Shared Infrastructure	Assisted Management	Service Management	Utility Computing
Business Interface	No SLA's	Arbitrary SLA's	Basic Class Of Service Business Level Reporting	End-End Service Mgmt	Utility Services
IT Organization	Distributed Functions Distributed Competence	Centers Of Competence	Simple Service Mgmt Discipline	Comprehensive Svc Mgmt Discipline	IT Value Center
IT Processes	Bespoke processes	Basic Mgmt Workflows	Routine Task Automation	Comprehensive Automation	Fully Automated IT
Software Capability	Non-Standardized No Hardware Abstraction	Basic Storage Abstraction Centralized Mgmt Tools	Std Software Tools Basic Auto Provisioning	Service Lifecycle Mgmt Actionable Infrastructure	End-End Utility Mgmt
Hardware Capability	Distributed, Proprietary	Shared Storage	Shared Server Pools	Hierarchical Modular Architecture	Commodity Hardware

Architectural Maturity

Key Principles

- ▶ Executive buy-in AND backing
- ▶ Agility: To Respond
- ▶ Flexibility: To Reuse
- ▶ Scalability
 - Storage, servers, network
 - People, offices, geographies
- ▶ Heterogeneity
 - This is not just about the OS
- ▶ Security
 - Build it in from the start
 - Build it in everywhere
- ▶ Keep it simple
 - OK... so as simple as possible will still be complicated...
 - No exceptions... exceptions cost time and money...
- ▶ **Communication**
 - **Listen to the business**
 - **Changes have to be 'sold' to the stakeholders**

**Change... It Is
Going To
Happen...
Accept It And
Move On**

What do the following have in common?

- ▶ They believe in convergence between data and security
 - At every point in the architecture
 - It is key to their corporate strategies
- ▶ Security is not built in at the last minute... it is the starting point
- ▶ You need to understand the risks

Where's The Problem?

**External
Hackers, Spies, Thieves**

Exclusion (Blocking)

**Internal
Thieves, Fraudsters
... And The Rest Of Us**

Inclusion (Surveillance)

The Threat Landscape Shift

Old Landscape

Threats are noisy & visible to everyone

Threats are indiscriminate, hit everyone

Threats are disruptive → impact readily visible

Remediation action is technical (“remove”)

Only a few named threats to focus on

New Landscape

Threats are silent & unnoticed

Threats are highly targeted, regionalized

Threats steal data & damage brands → impact unclear

Remediation more complex, may need to investigate data leak

Overwhelming amount of variants, nameless threats

Security Everywhere: Endpoint Compliance

- ▶ Start with the obvious
- ▶ Ensure that there are no holes in the basic infrastructure
- ▶ Deal with unmanaged systems
- ▶ Deal with the managed systems

- ▶ Next generation security: Behavioural Protection

SOA: Increasing or Decreasing Complexity?

- ▶ Haven't you heard this before?
 - Improved reuse
 - Modular development
 - Object oriented
 - Data driven
- ▶ But...
 - Increased tangle of applications – no tools to monitor / manage 'the whole'
 - Standards
 - Interoperability Agreements
 - Service Level Agreements
 - Downtime (planned or otherwise)
- ▶ Who's in control of your information? Who's in control of your business?

“By 2008, more than 60 per cent of enterprises will use SOA as a ‘guiding principle’ when creating mission-critical applications and processes”

- Gartner

The Risks

Summary

- ▶ **Agility is the key to success**
- ▶ Build a Service Oriented Infrastructure
- ▶ **Standardize**
 - ▶ Standardize – environments
 - ▶ Standardize – procedures
- ▶ **Understand the business**
- ▶ Continuously ask: Is our architecture and the services we offer the best for the business

Innovate: Stay One Step Ahead

A Quick Plug...

- ▶ Published by Wiley & Sons, December 2005
- ▶ A complete methodology for delivering utility computing
- ▶ A guide to selecting tools
- ▶ Case studies

- ▶ Available from Amazon.co.uk and Wiley.com

Thank You
