

# Torpedo Enterprise Advanced Modeling and Simulation (TEAMS): Case Study Status

*Presented to:*  
Enterprise Architecture  
Practitioner's Conference  
London, United Kingdom

*Presented by:*  
Judy Cerenzia  
Applied Research Laboratory  
Penn State University

01 December 2006

# Outline

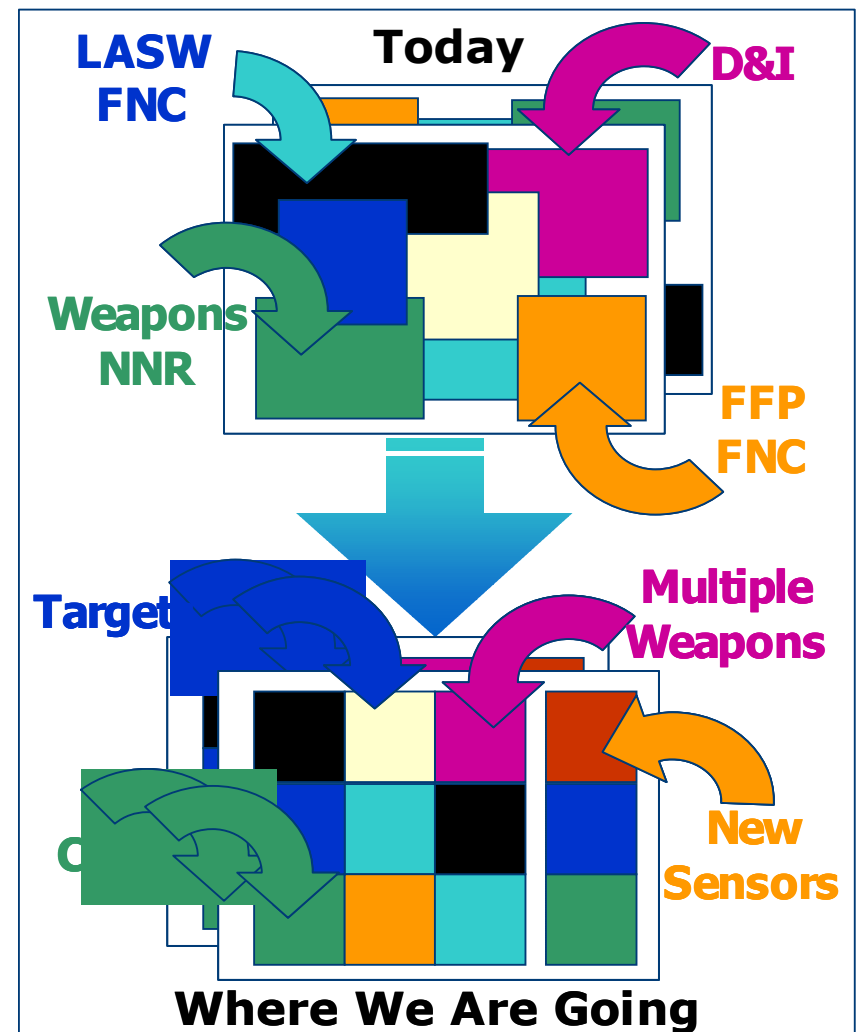

- **Why TEAMS?**
  - The Problem
  - The Solution
- **The Process: TOGAF 8.1.1 ADM**
- **The Method: Model Driven Architecture**
- **The Results: Organizations Looking to TEAMS**
- **TOG/OMG Synergy Update**
- **Overall TEAMS Goals**

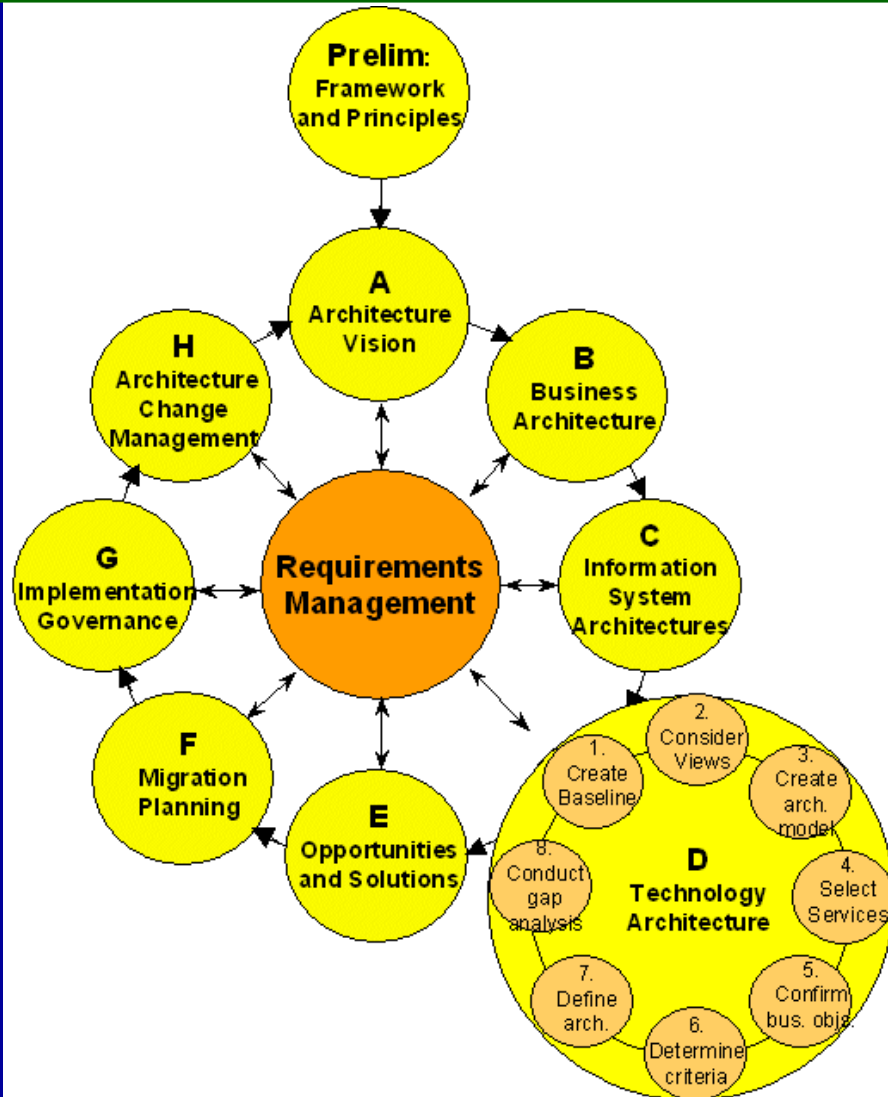

# Why TEAMS?

- **Problem: Modeling & Simulation Business Model – Obsolete**
  - Monolithic
  - Stove pipes
  - Single developers
  - No communication
  
- **Solution: Foster Collaborative M&S Development Environment**
  - Standardize M&S architecture framework and component models
  - Reduce the technology development timeline
  - Increase model content, implementation efficiency and reuse
  - Reduce cost

# The Process: TOGAF ADM

The Open Group:  
IT Consortium  
Offers Consortia Services

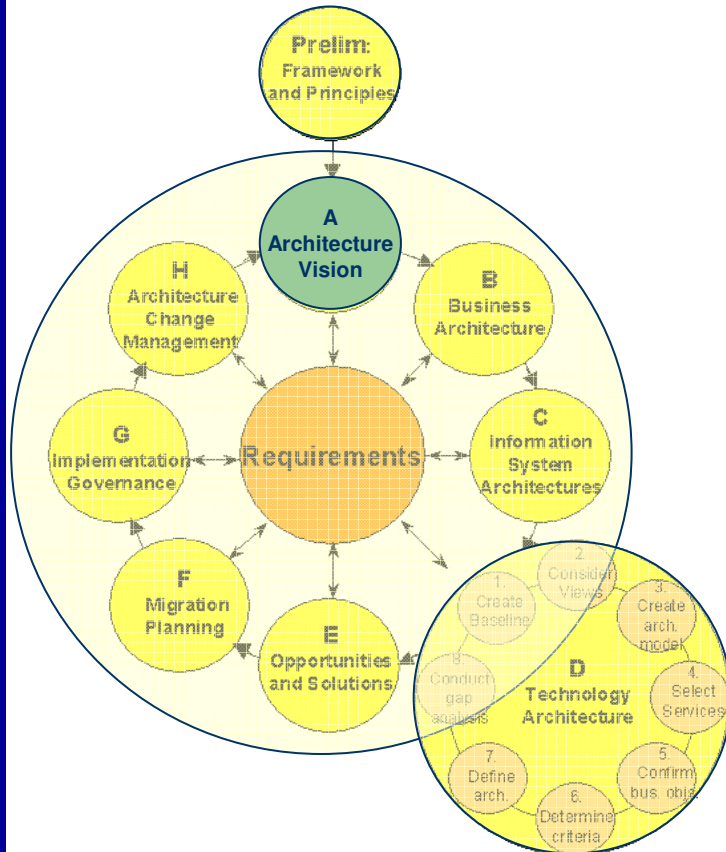

TOGAF:  
The Open Group  
Architecture Framework

ADM:  
Architecture  
Development Method

# The Process: TOGAF Phase A

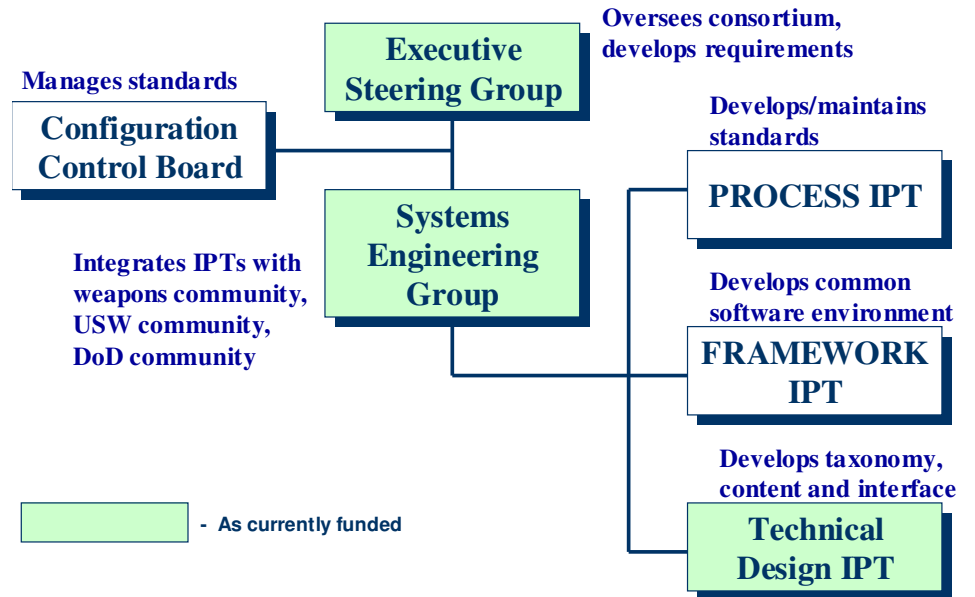

## The Open Group Architecture Framework Architecture Development Methodology

### Architecture Vision:

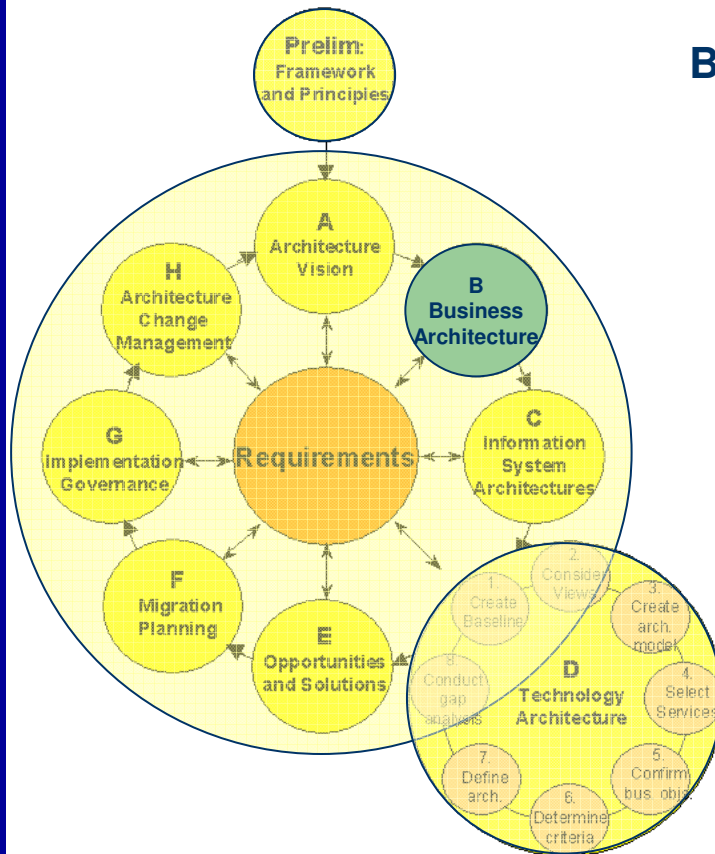

- Establish M&S Consortium
- Determine Stakeholders
- Achieve consensus on problems and solutions

# The Process: TOGAF Phase B

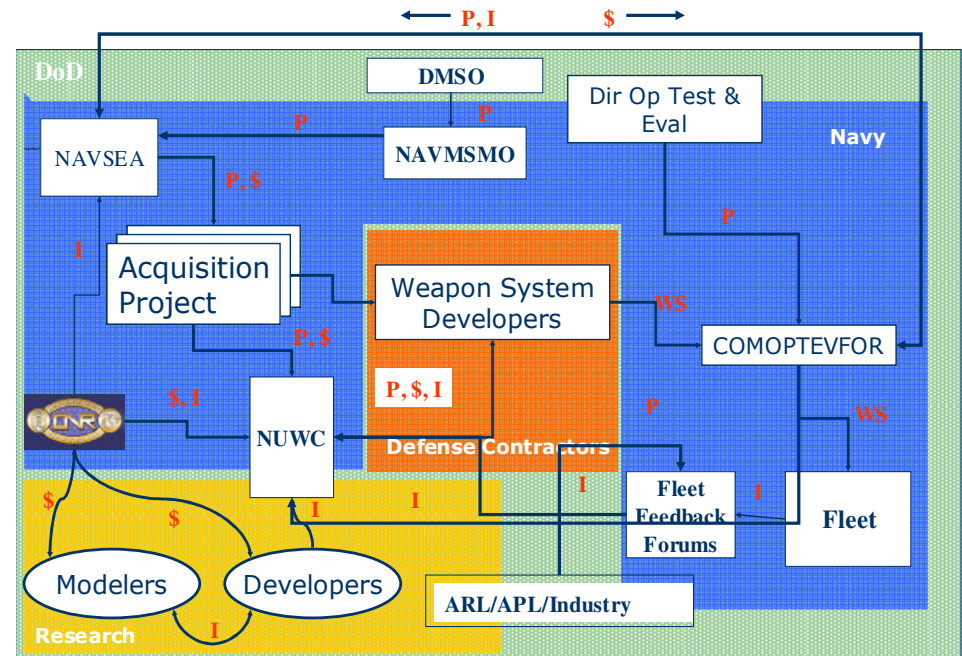

## The Open Group Architecture Framework Architecture Development Methodology

### Business Architecture:

The TEAMS consortium had detailed discussions about strategic business drivers that influence modeling and simulation.

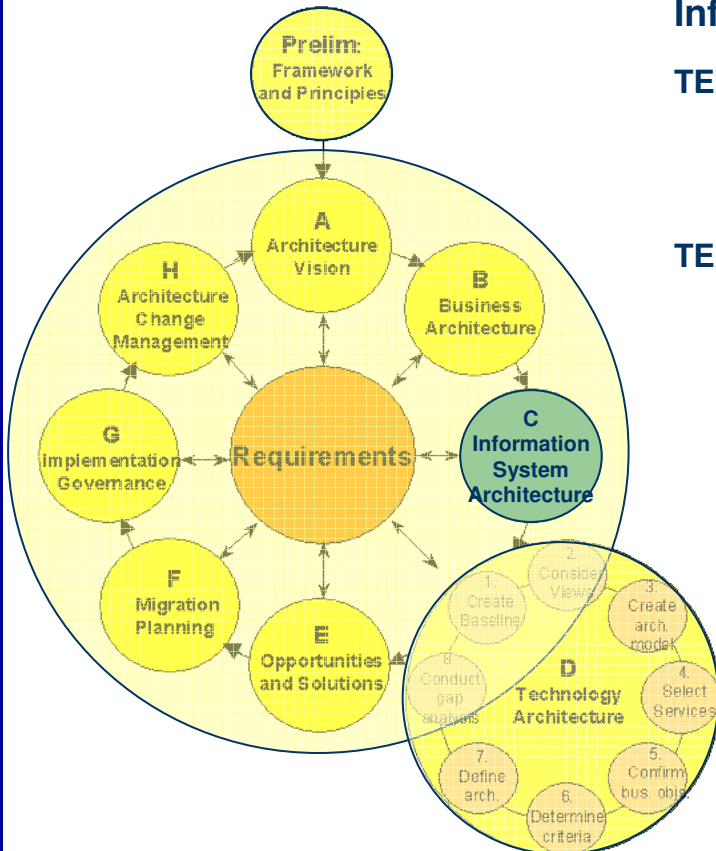

I = information; P = policy; \$ = funding; WS = weapon system

# The Process: TOGAF Phase C

## The Open Group Architecture Framework Architecture Development Methodology Information Systems Architecture- 2 components

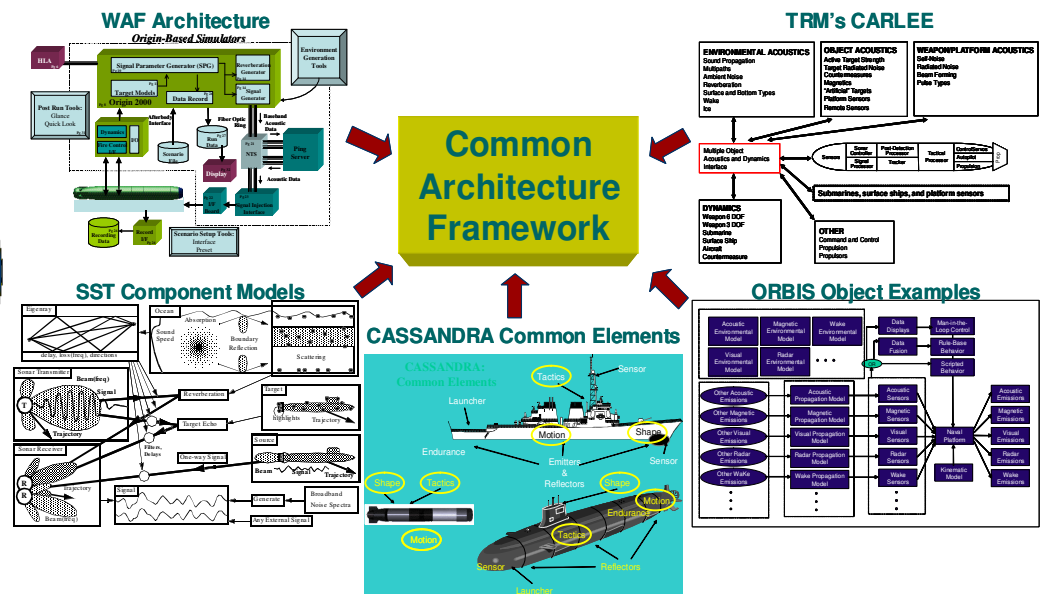

### TEAMS Applications architecture

- Baseline simulations – provide components
- Generate TEAMS Compliant interfaces for Components
- Reinsert standardized components into simulations

### TEAMS Data architecture

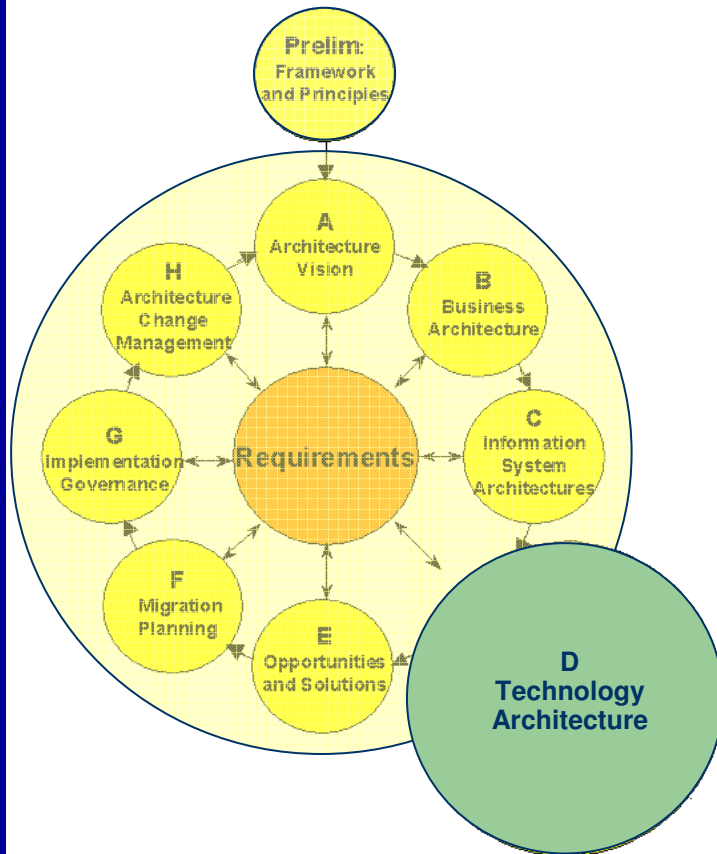

- Attributes : inputs and outputs between component classes
- UML Collaboration diagrams : control flow and data flow
- Gap analysis: ensure data descriptions directly correlate to interface APIs

# The Process: TOGAF Phase D

## The Open Group Architecture Framework Architecture Development Methodology

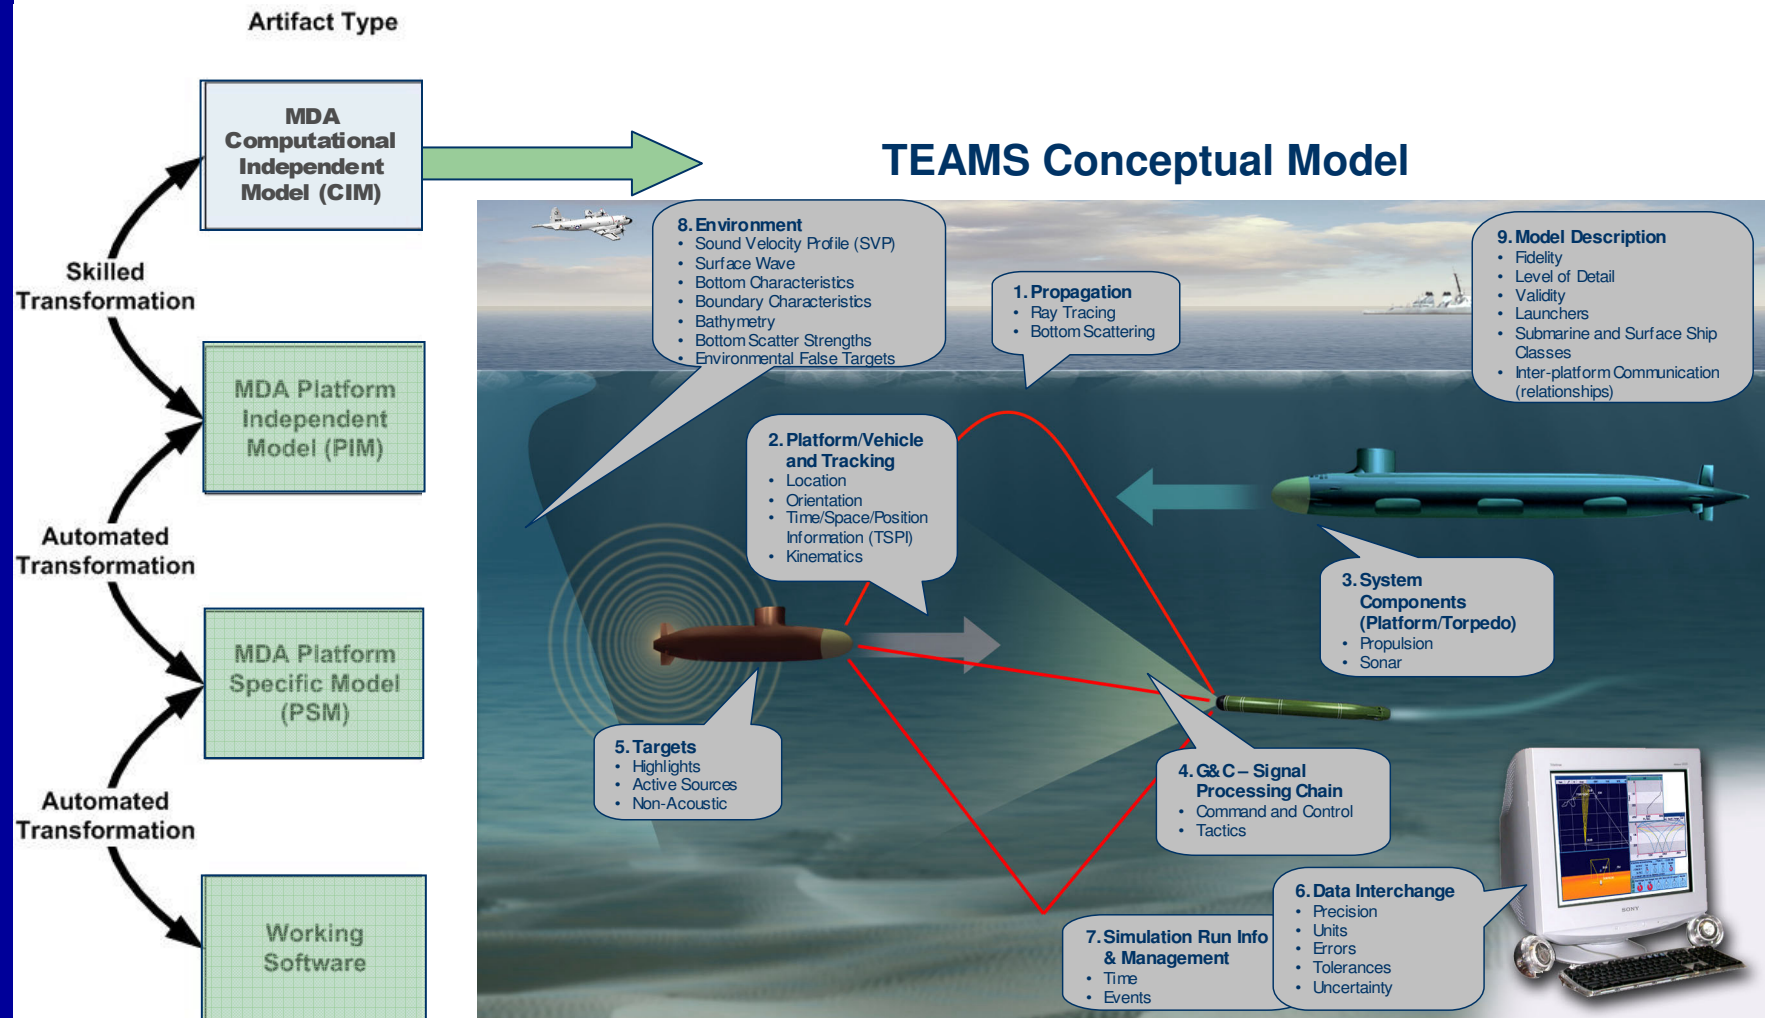

### TEAMS Technology Architecture Process:

- Define use cases
- Define Ontology Groupings
- Define major concepts as classes
- Define static relationships between classes
- Define key attributes for the classes
- Define methods that link the classes
- Define dynamic relationships between classes
- Define representative scenarios
- Perform gap analysis on missing classes and relationships

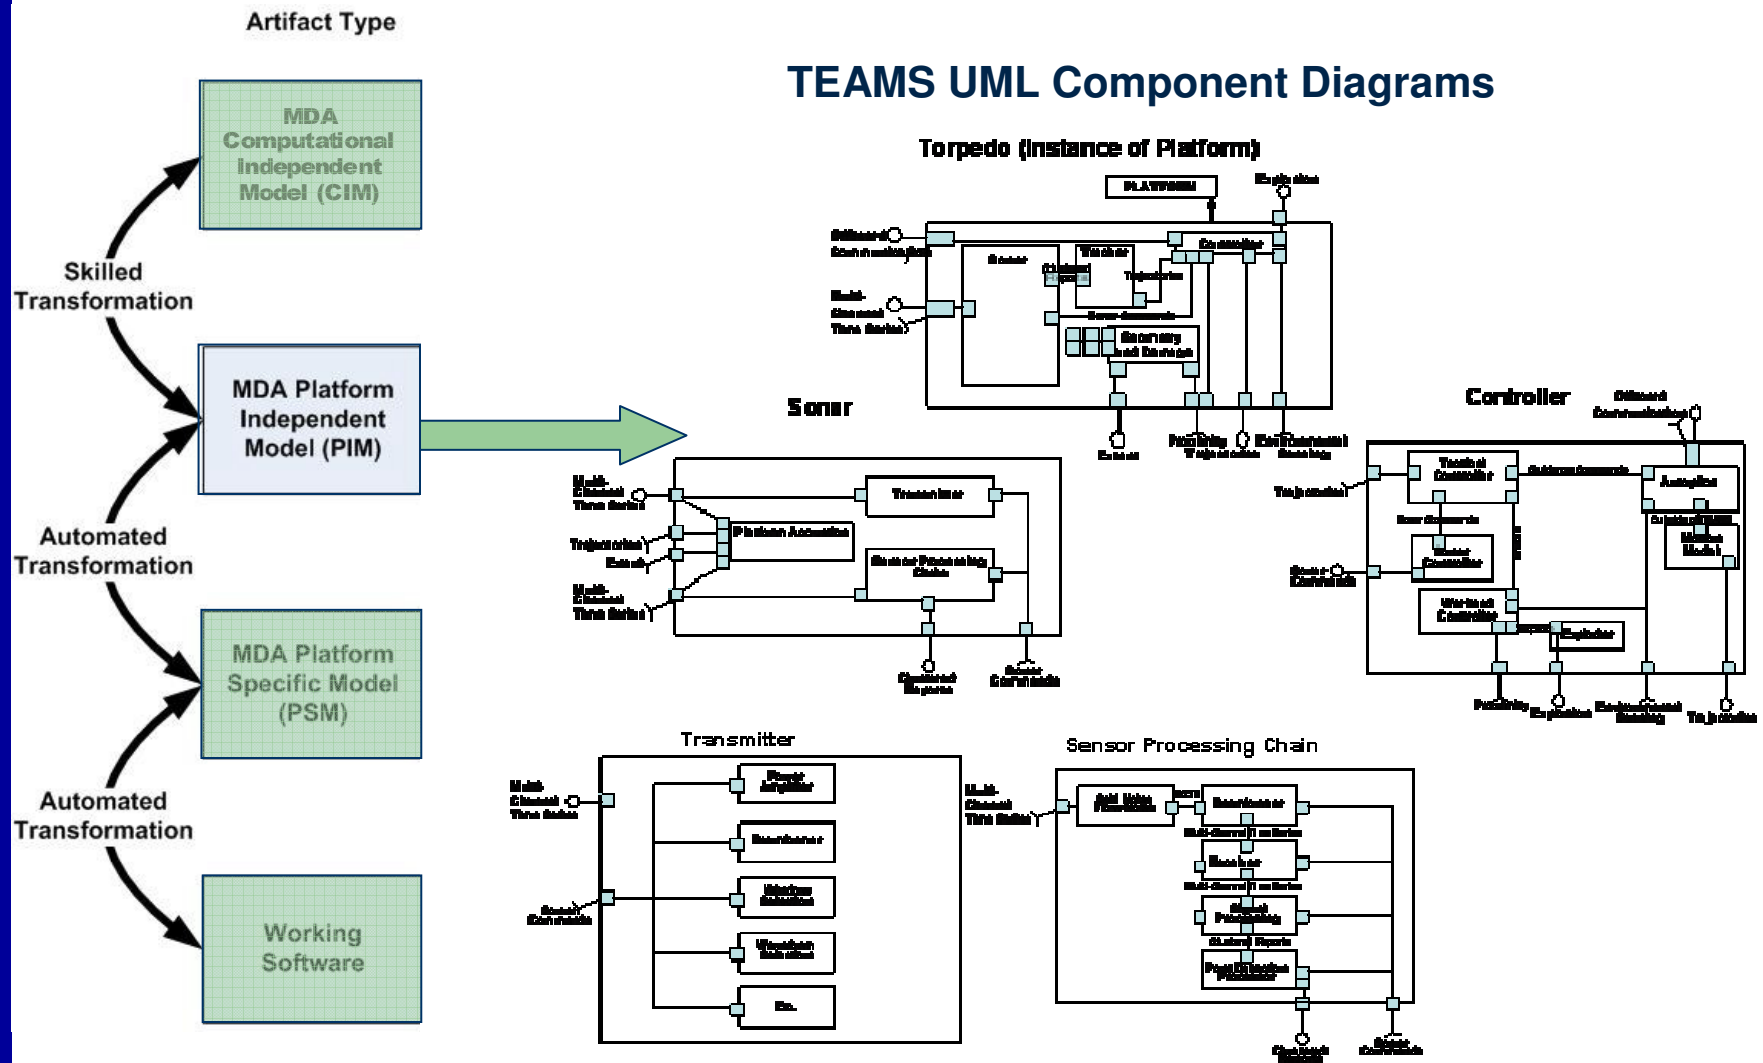

Name	System Emulation of Broadband Weapon	Loss of Array Element	Performance Assessment of Signal Processing Algorithms	Future Weapon System Parametric Analysis	Virtual Torpedo w/ HWIL Pursuing Real Target on Real Range
Objective	Exercise Operational Weapon System That Will Be Tested During Op & Tech Eval	Engineering Evaluation of Robustness of Specific Subsystem Design to Damage	Evaluate Effect of Candidate Algorithms on System Performance Within Fleet-Approved Scenarios Before Next Stage of Design	Assess Performance Metrics, e.g. Pk, TTH Based on Input Environment and Platform Performance Parameters	Cost-Effective Training @ High Realism
Attributes	Not Real-time Highest Detail	High Detail Within Restricted Scope Not Real-time	Fast Results - Many Repetitions & Scenarios (25 Reps/Scenario) Moderate Detail	Simplified Inputs Very Fast Results - Many Reps to Explore Parameters & Distributions (1000's) Low Detail	Real-time HLA Connectivity
Sim Level	Engineering	Engineering	Engagement	Engagement	Engagement

Simulation Office

# The Results: Organizations Looking to TEAMS

THE *Open* GROUP

International organization, developers of TOGAF architectural framework

- Wants TEAMS as test case for TOGAF 8.1.1 and 9.0
- Interest in using TEAMS to test synergy between DoDAF and TOGAF frameworks
- Wants TEAMS for its process to incorporate Ontologies (relationships of components)

International organization, developers of several business communications standards

- Wants TEAMS as test case for their TOGAF/ Model Driven Architecture (MDA) synergy effort

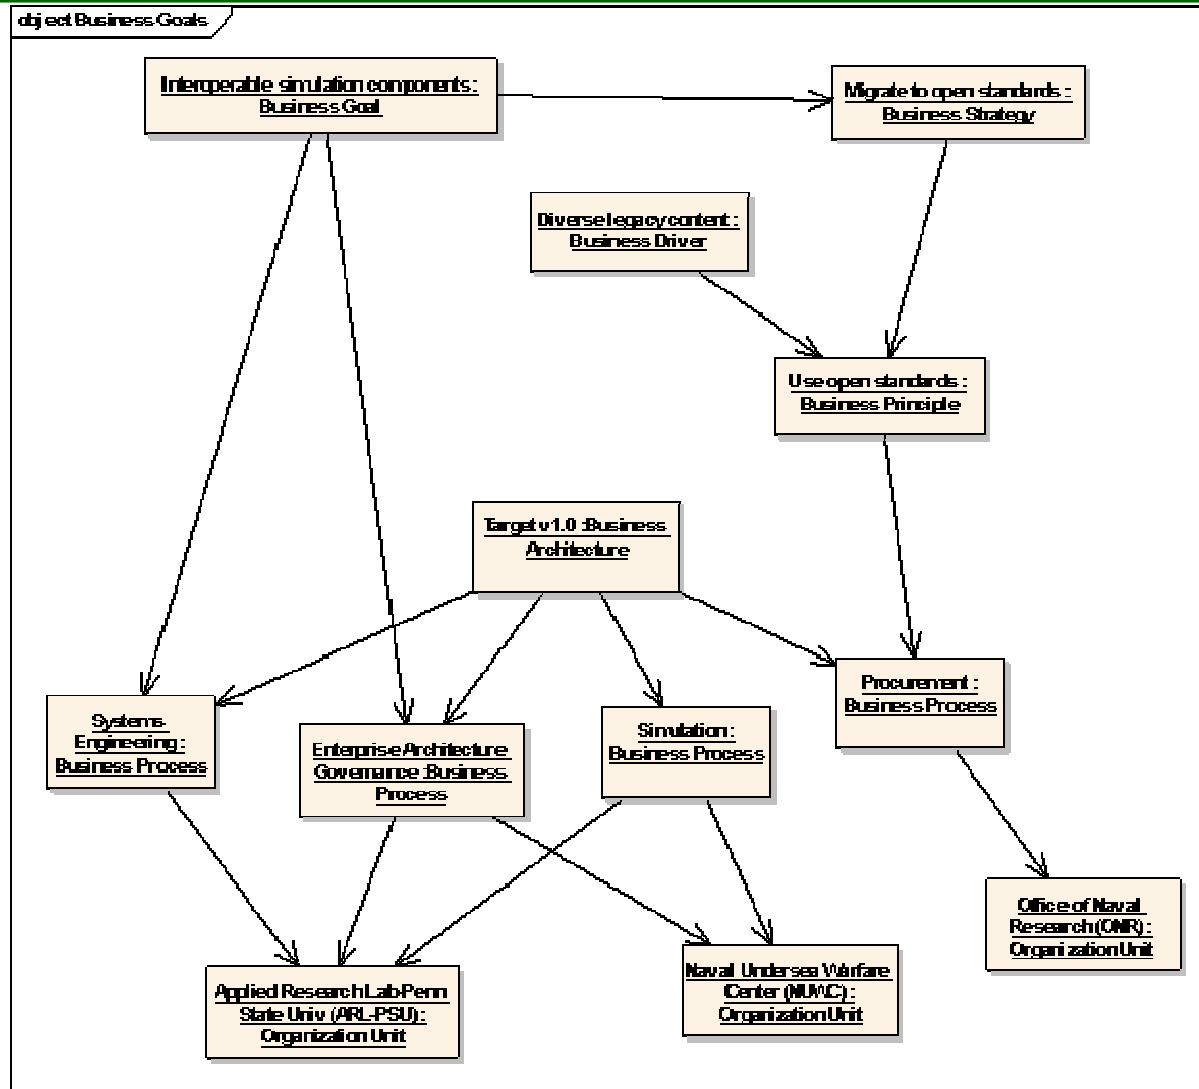

The Open Systems Joint Task Force of the Office of Secretary of Defense (OSD)

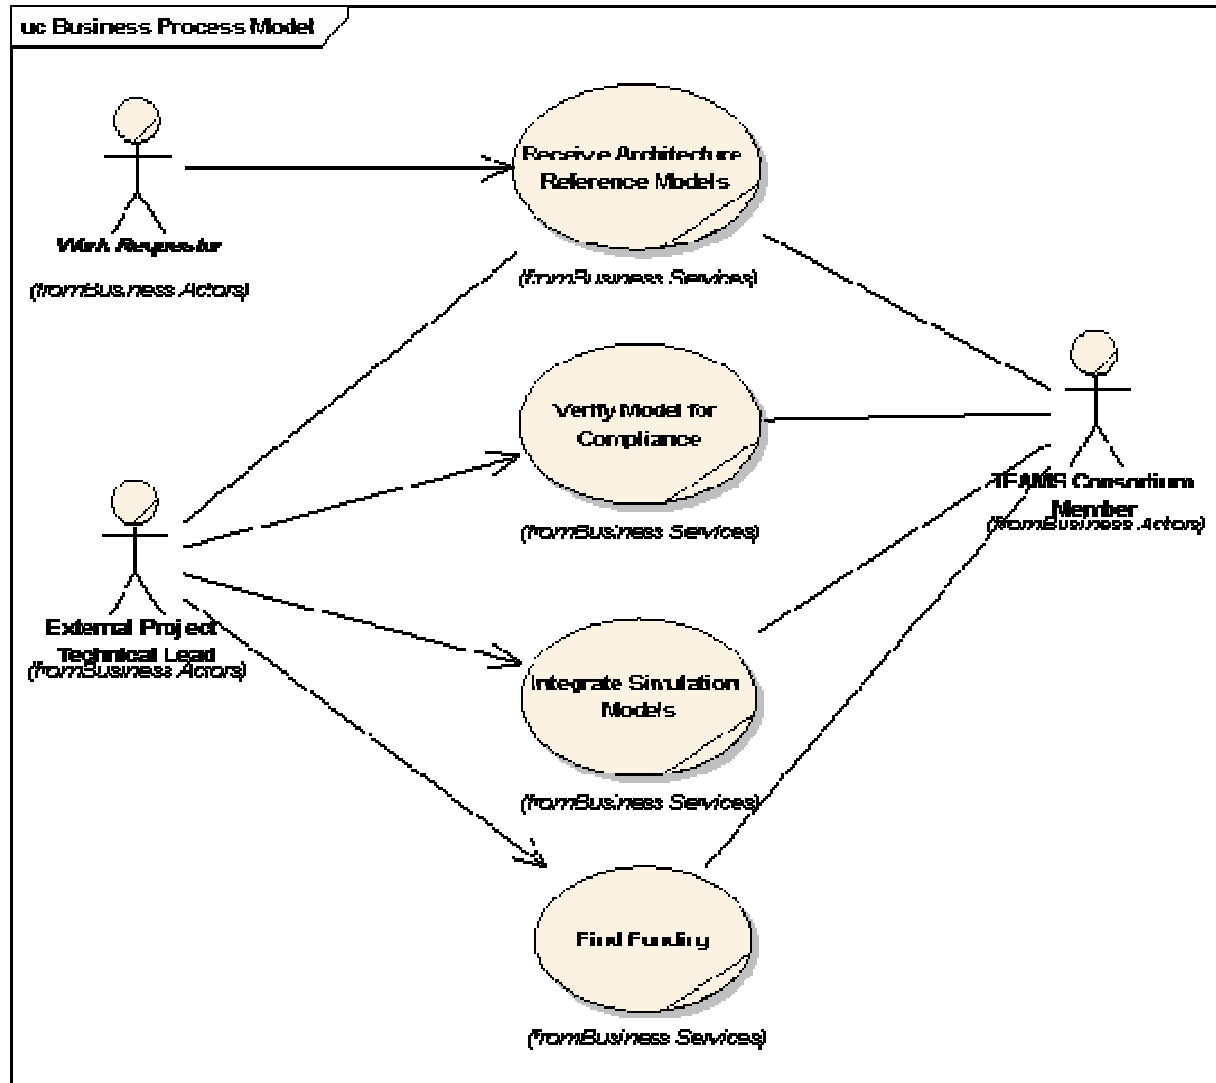

- Wants to convert TEAMS UML artifacts to the newly approved SysML standard to demonstrate utility of the new standard

**TEAMS is quickly yielding *highly visible* and *transitionable* results.**

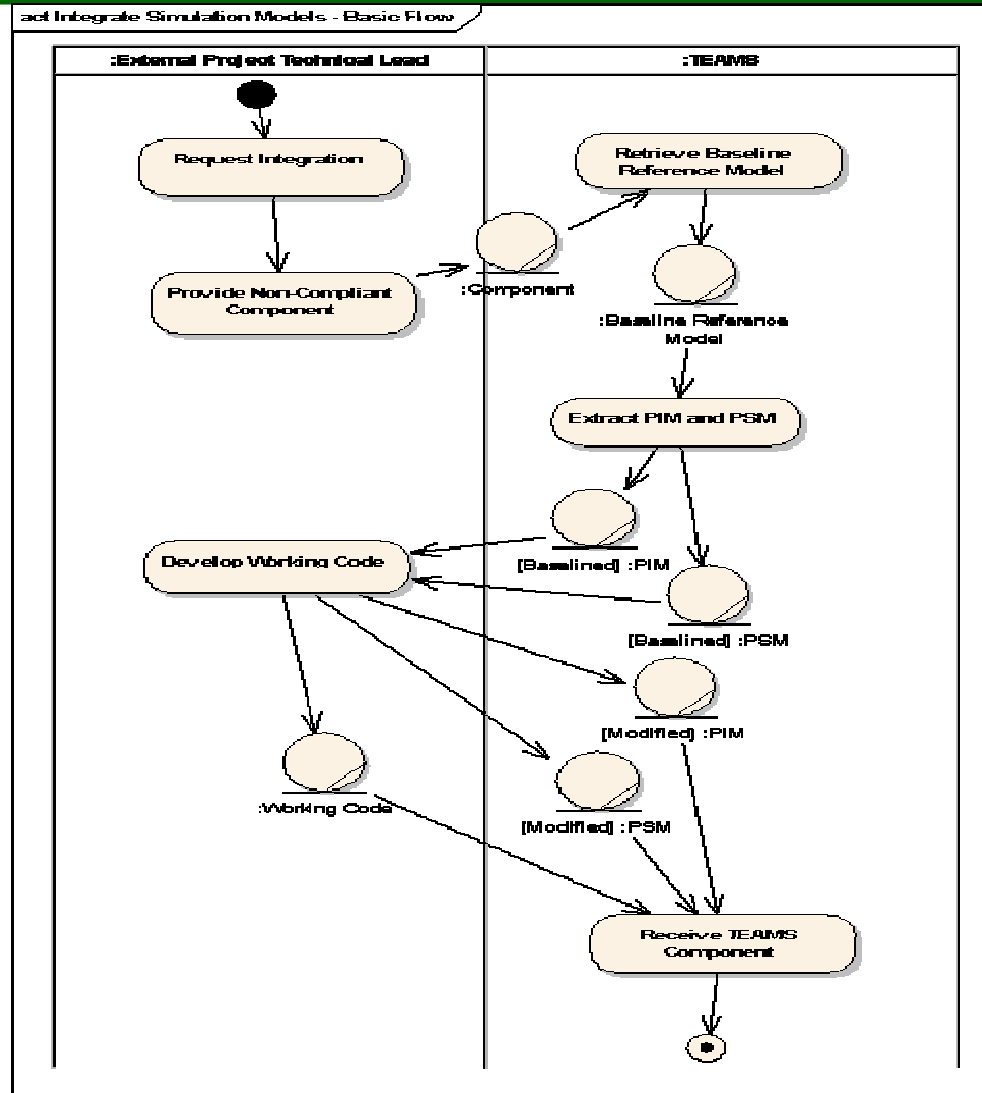

# Phase A: TOG/OMG Synergy Examples

# Phase B: TOG/OMG Synergy Examples

# Phase B: TOG/OMG Synergy Examples

# Overall TEAMS Goals

- **Modeling and Simulation Community Collaboration**
- **Standardized architecture framework**
  - **Conceptual model**
  - **UML requirements specifications**
- **Standardized model interfaces**
  - **Interchangeable components**
  - **UML requirements specifications**
  - **XML schema – extend to other applications**
  - **OWL ontology – semantic descriptions**
- **Documented standards and requirements**
- **Cost effective process to achieve interoperability and composability**
- **Business model for future cross-organization M&S funded efforts**
