

“Architecture” A holistic concept

Building bridges between architectural disciplines and concerns
makes Architecture a strategic asset and capability
for Industries, Companies, Regulators and Consultants

Walter Stahlecker, Fellow of The Open Group

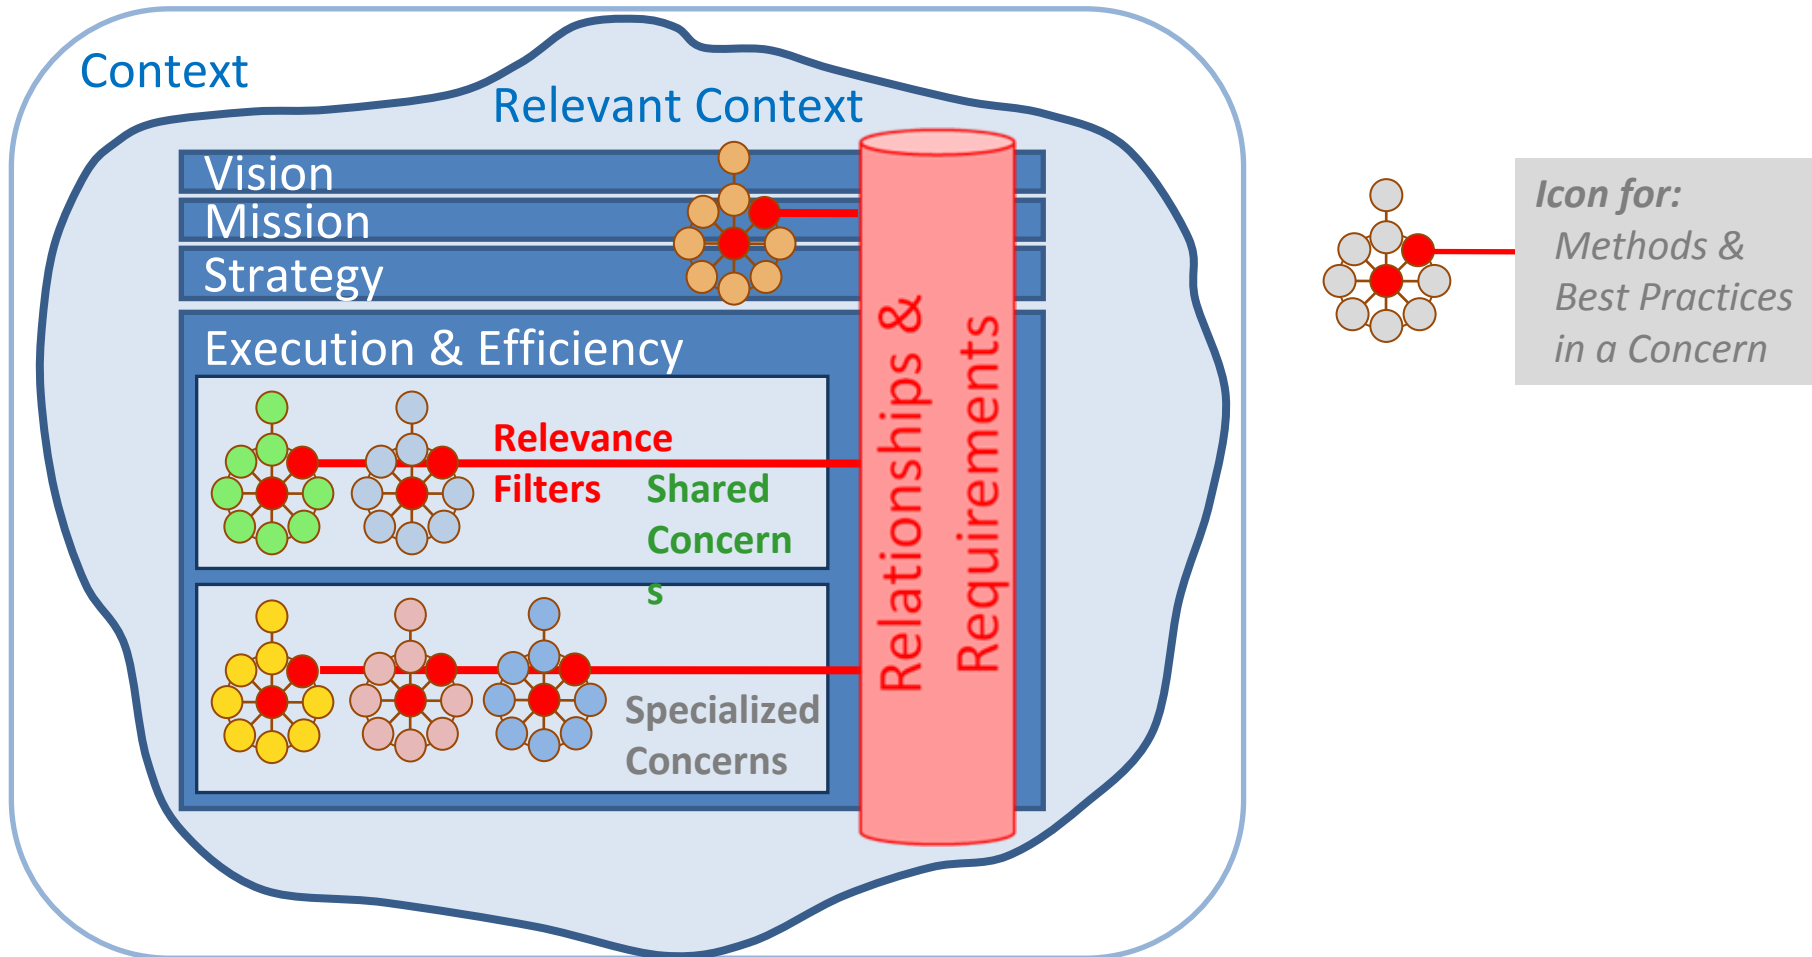

Toronto, July 21st 2009

Model of an Enterprise

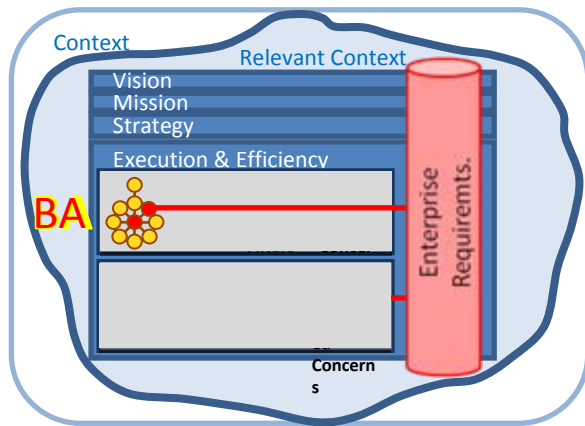

Such differentiation is deliberate and driven by balancing effort with effectiveness

Model of Holistic Enterprise Architecture

Attempt to position Business Architecture

Business Architecture:

“Chemistry – how the intended value, defined by stakeholders, is created from the capabilities”

(This is intended as description, not definition)

Range of “chemistry” types: Rigid to ad-hoc, explicit to tacit, simple to complex, etc.

Business Architecture:

- Much richer than an org-chart or business processes
- Expressed in executives’ language

Business Analyst / Business Architect

Note: This slide is inserted to capture a verbal statement of the presenter

- Architecture: Defines the essential properties of a solution, bounding decisions on design
- Analysis: Provides facts and understanding of solutions, enabling architectural decisions
- Architecture and Analysis can be seen as two sides of a coin
- “Architect” and “Analyst” can be two roles of one person
