Directeur principal de pratiques d'affaires, associé Senior Practice Director, Partner Background:
Quebec based Organizations

- **Diane Bili** CIO and VP USCI

Information Technology Veteran who is leading a complex business transformation initiative –
Game Changer.

Panel Discussion

What makes an organization complex, is it the size, focus, distributed versus centralized, culture, operating model?

Given the nature of complexity, how did you go about creating EA Practice or even an engagement so you can demonstrate value and remove this “ivory tower stigma of EA”?

Value of EA is defined as – “By being inclusive with all other management frameworks, EA is a discipline that helps the Enterprise define, develop and exploit boundaryless information flow capabilities in order to achieve the Enterprise’s Strategic Intent.” , how did you define capabilities in complex organizations.

I come across a lot individuals, STAR architects, they struggle to make head way and finally they just conform . What will be your advice to them. What should they expect to accomplish in first 30, 60 and 90 days.
