**SOURCE:** Foote Partners, *IT Skills and Certifications Pay Index™* and *IT Workforce Demand Survey* - July 2009 editions (1,960 employers/88,300 IT professionals)

# IT Security Skills Demand Trends

- Data security ranked highest priority in Foote Partners CSO Survey (January 2009)
- Web application security (secure S/W development)
  - Skills in demand: C, C++, Java, .NET developers with expertise in cross-site scripting (XSS), SQL injection, code injection, cookie injection, Lightweight Directory Access Protocol (LDAP) injection, application firewall bypass, cross-site request forgery, buffer overflow, single sign-on (SSO) flaws
- Electronic medical record systems (aided by Obama digital records mandate)
  - Skills in demand: Application security, access control, data integrity and data loss prevention
  - Security challenges: Software, system integration and **compliance**
- Securing the virtualized computing environment

# IT Security Skills Demand Trends

- Governance, risk and compliance (GRC)

Cert to watch: ISACA/ITGI's **Certified Governance in Enterprise IT**

**Components**

IT governance frameworks	Risk management
Strategic alignment	Resource management
Value delivery	Performance management

- Continues to converge into one discipline but at a v-e-r-y s-l-o-w pace
- Expanding definition of risk for CISO/CSOs; Operational, Brand, Financial
- Greater attention is being paid to security metrics, staffing and organizational structure

# IT Security Trend Drivers

- Regulation...SarBox, FFIEC, FISMA, HSPD-12, FIPS, EDPA, CA SB1286, just for starters
  - Public Company Accounting Oversight Board (PCAOB) continues to evolve
  - Requirements for automated, repeatable controls and processes around the classic information compliance drivers
- Legal risk and the implications of noncompliance intensifying
  - Fines, irrevocable damage of company brand and reputation;
  - Changes to the U.S. Rules of Civil Procedure regarding document retention making it harder for companies to mount effective litigation defense.

# IT Security Trend Drivers

- Dismantling of the IT security "empire"
  - Overall information risk management versus tactical, technical focus on IT operations
  - Security organizations splitting into strategy teams (business issues of risk management) and operational teams (technical, esp. networking)
- *Datacentric security*: Working with business to classify data to determine who gets to see it and how to protect it.
- Proactive security programs spanning entire application lifecycles
- Customers are pressuring vendors to build better security into products and services...or else

# Some Security Challenges and Holes

- Communication between IT and business executives about security: understanding the business and where it's heading...not letting technology drive strategy.
- Aligning security spending with the true risks and threats being addressed
  - Traditional perimeter-type approaches are missing many threats.
  - Gap between security spend and today's risk is shocking
- Comprehensive knowledge of IT architecture to enable secure design (ground-up secure infrastructures)

**The requirement to work with business professionals is probably the greatest hurdle security professionals have to face.**

# Security Challenges and Holes, cont.

---

- Full awareness and security coverage of the enterprise computing environment
- Endpoint vulnerability shifting dramatically from the OS to the web browser
- Immaturity and expense of newer technologies
- Security metrics: finding better ones, using them more adroitly

# FP Salaries: Security Architect (US)

- 10-15 years prof. experience, with 7+ in IT security incl. policy (DHS, NIST), modeling, infosec regulatory compliance(PCI, SOX)
- Strong IT security technology knowledge
- Strong communicator and influencer
