- **Terms**
- **Boeing Multimedia in the Network**
 - Video
- **Boeing VOIP Requirements**
- **Boeing Wireless and Mobility Requirements**
 - VOIP over WLANs
 - Video over WLANs
- **Boeing QoS Now**

Some Terms of QoS

Middleware

QOS

Differentiated Services

Integrated Services

Label Switching

Network Middleware (low speed links)

Voice Over IP (VOIP)

Video Over IP

Voice Quality

Video Quality

Voice Interworking

Service Level Agreements (SLAs)

Session Initiation Protocol (SIP)

What is QoS Used for at Boeing?

- Nothing so far
- Expected: Video and VOIP streaming
- Cisco House
 - Skinny Protocol
 - QPM
 - SIP Commitment

Boeing Video History

- 1998 Boeing Outsource of switched voice services
- 1999 Multimedia Lab
- 2000 Multicast Pilot
- 2001 Multicast Deployment in Puget Sound, 2002 others
- Video deployment of executives conveying messages to employees
- Internet2 Access Grid Prototype
- Reliable Multicast requirements

Boeing VOIP History

- 1998 Boeing Outsource of switched voice services
- 1999 Published VOIP Vision and Architecture
- 1999 VOIP for overseas (SITA Network, Cisco protocols)
- 2000 VOIP Pilot for Corinth Texas
- 2000 VOIP Pilot for “greenfield” VOIP Deployment (Issaquah)
- 2001 VOIP Pilot for Ogden/Salt Lake

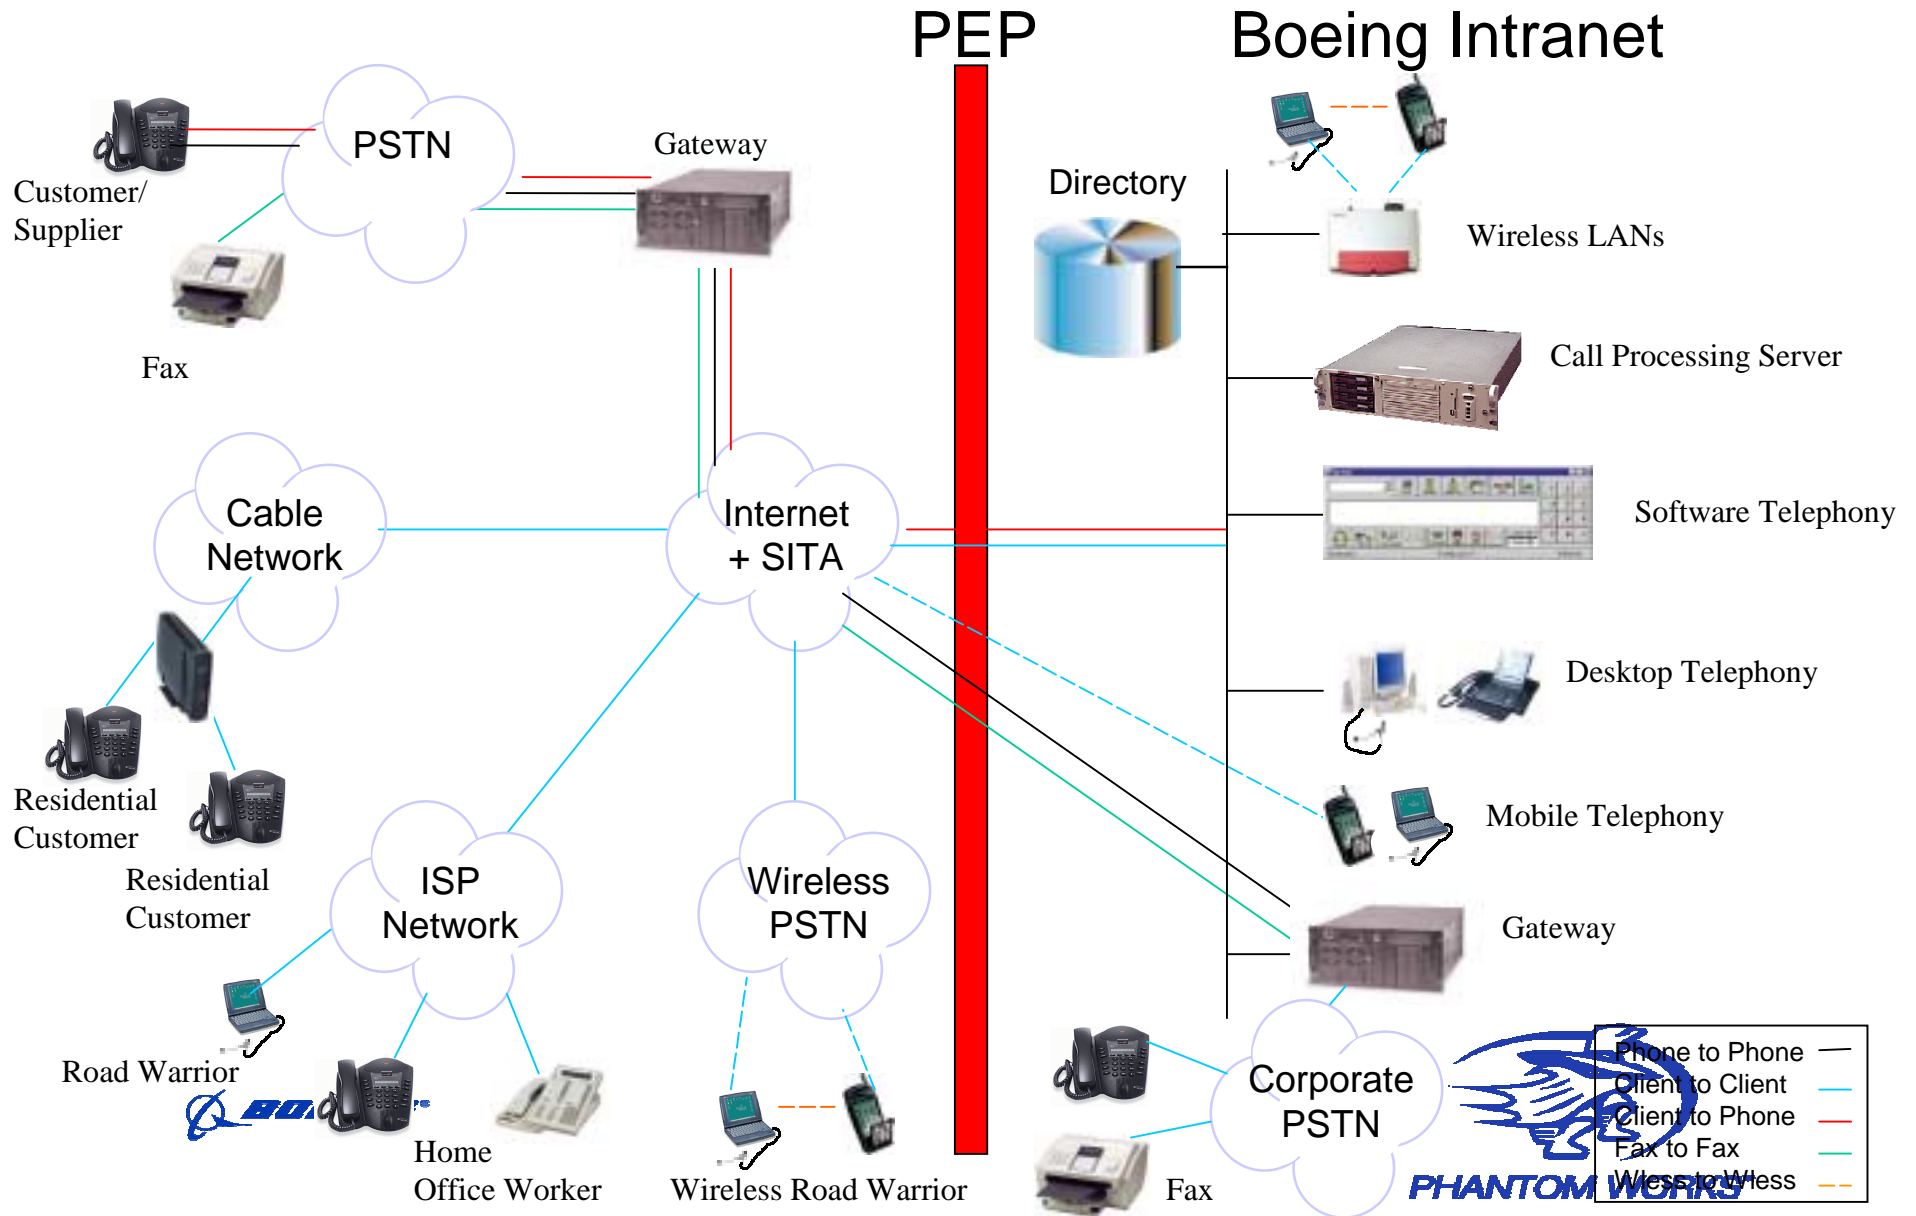

Boeing VOIP QoS Approach

- Isolate VOIP in VLANs
- Single ethernet switch outlet per seat (600 seats in Issaquah)
- “Throw bandwidth at the problem” approach

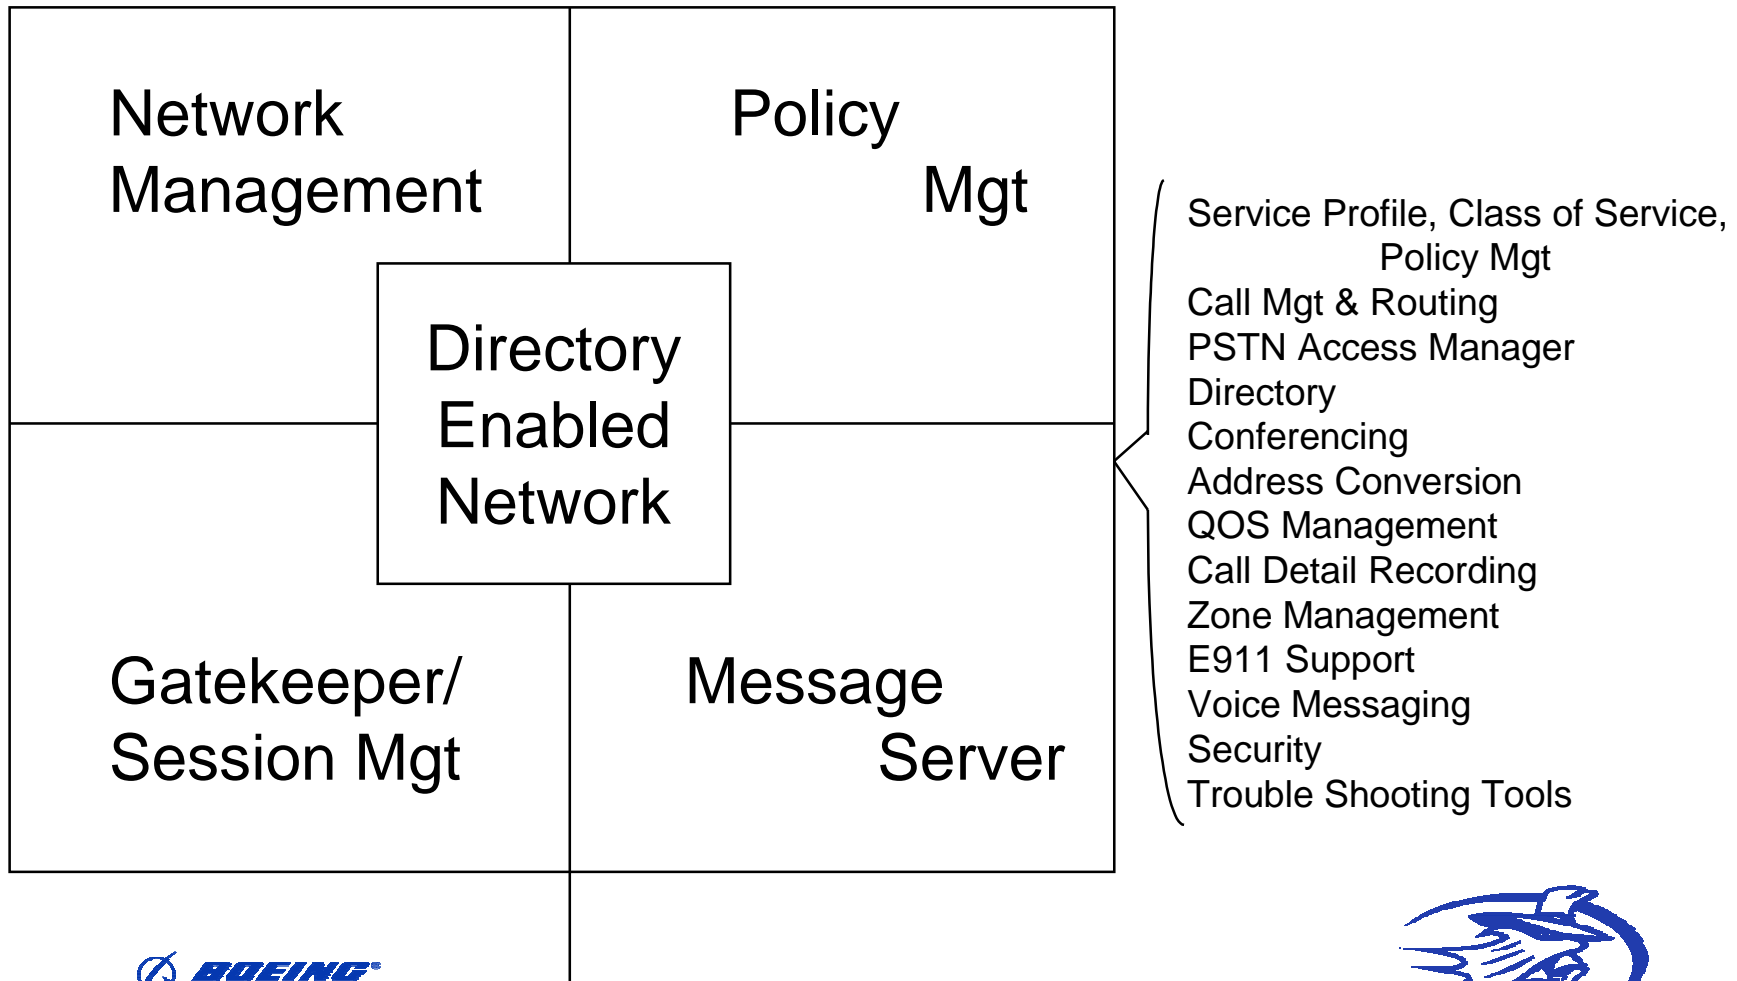

VOIP Requirement

Boeing VOIP Strategic Architecture

VOIP Services

Cisco's QPM Technologies

Inbound to Outbound →

Color	Limiting	Queuing for Congestion - Outbound	Queuing for Avoidance - Outbound	Signaling
Policy-Based Routing PBR	Generic Traffic Shaping GTS	First In – First Out FIFO		IP Precedence
Committed Access Rate CAR	Frame Relay Traffic Shaping FRTS	Priority Queuing PQ		RSVP
	Limiting Routers	Custom Queuing		
	Limiting Switches	Weighted Fair Queuing WFQ		
		Class-based Weighted Fair Queuing		
		IP RTP		
		Weighted Round Robin WRR		
		2Q – 2T		

QoS Priorities

1. Throw bandwidth at the problem
2. Supply QoS for low speed links without other option
3. 2.5G and 3G generally will require QoS
4. WLAN QoS Built In (sort of)

QoS for VOIP Over WLANs

- 802.11e offers QoS for streams
- 802.11a offers higher speeds “throw bandwidth at the problem”
- 802.11 Wireless Next Generation (WNG) is working on the next generation of higher speeds

Boeing QoS Now

- Need for QoS applied to VOIP for all VOIP
- Cisco QPM Pilot
- Reliable Multicast Prototype
