

"In-the-Field" Health Informatics

Per Hasvold

Research Scientist, Norwegian Centre for
Telemedicine

PhD student, Dep. of Computer Science,
University of Oslo

per.hasvold@telemed.no

"In-the-field"

- Human – human relations
- User focus on other tasks than using a mobile information system

"In-the-field"

- Tasks
- Procedures
- Formal information
- Informal Information
- Documentation
- Co-ordination
- Collaboration

The story of Nurse Lars

The Norwegian Centre for Telemedicine

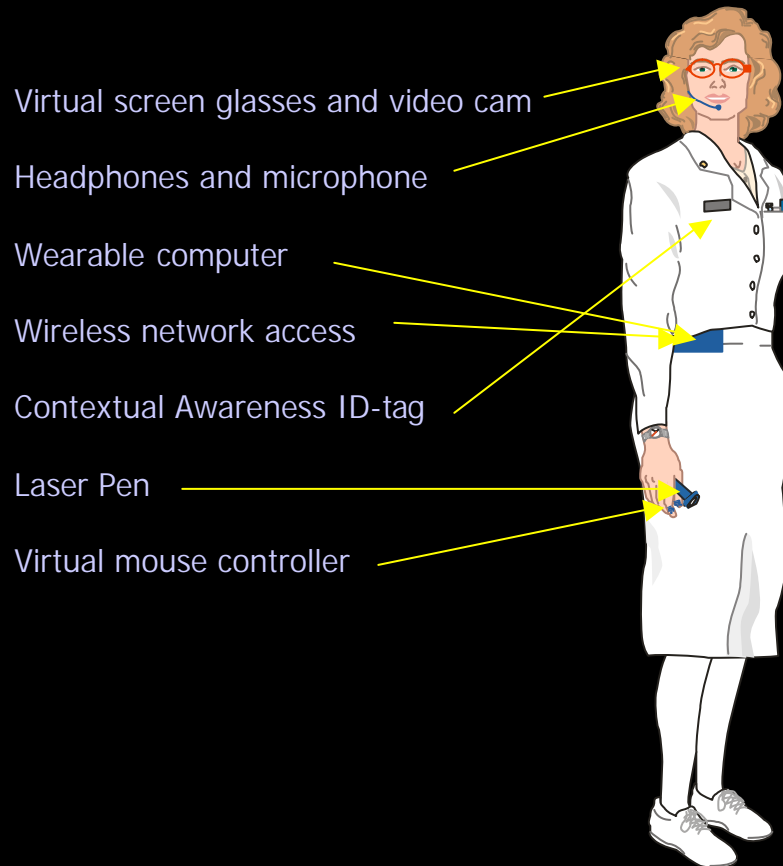

- Non-profit part of Norwegian public healthcare
- R&D on Telemedicine and Health Informatics
- Multi disciplinary (approx 30% technology, 50% social sciences, 20% health)
- Funded 75% by Department of Health, 25% by research funds (Norwegian, Nordic and EU)
- Almost 100 people (65 man years)

Telematics and Health Informatics

- A way to **organise** healthcare services
 - By use of technology
 - Independent of
 - Distance
 - (Time)

The CyberNINA Concept

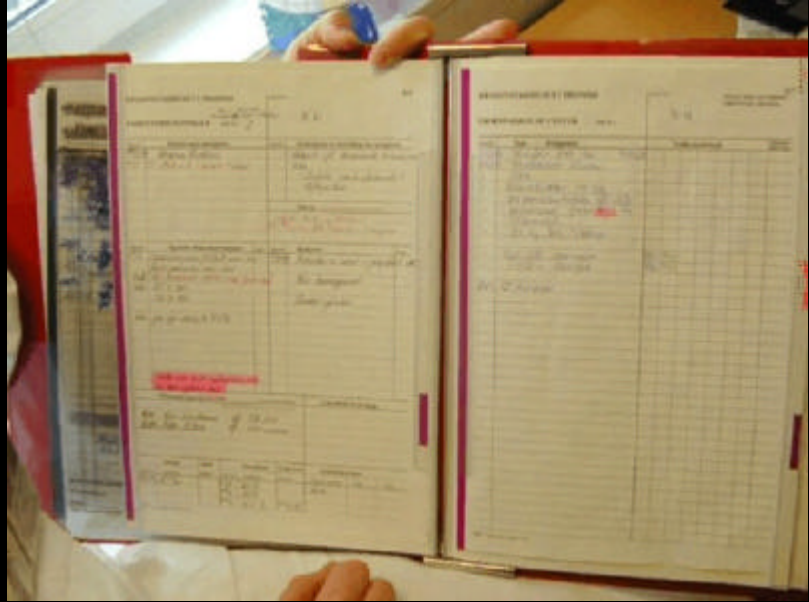

- Created in 1997
- Wearable computing
- Wireless networks
- Personal networks
- Augmented Reality
- Contextual Awareness
- Collaboration
- Information sharing

Research Methods

- “Apprenticing”
- Brainstorm sessions
- Workshops
- Storytelling

Is there an interest in mobile computing?

- Wireless LAN covering entire department
- 2 Portable PC's
- Access to all hospital information services
 - Laboratory
 - Radiology
 - Electronic Patient Record
- Used for pre-visit meetings
- Used by some during visiting rounds

Whiteboard

Whiteboard on PDA – Patient list

	<u>Ledig</u>	<u>Ledig</u>

System overview

- Servers: MS NT, MS IIS, MS SQL Server
- Application: Active Server Pages
- Plasma screen: 40"
- Wireless LAN: IEEE 802.11b, Orinoco WaveLAN
- PDA: 18 x Compaq iPaq w. backpack for PCMCIA card (Wireless LAN)
- PC: Connected to Plasma screen + access to all hospital information systems
- PDA User accounts do not have access to other hospital information systems

Other issues

- Will we need formal meetings when less time is spent chatting?
 - Should we design in coffee bars?
- Users and non-users?
- Concern of health risk
- Flexibility vs. standardisation

Smart Wear

- Design project
 - Finished at end 2001
- Plastic models of best 2 – 3
 - Fall 2002
- Next step?

...almost there...

- Battery lifetime
- Security
- Weight
- Integration with installed base
- Must be possible to sterilise device
- R&D \Rightarrow commercial product!?!?
- TRUST between co-workers on the net

Mobile applications in Nordic Healthcare

- A number of projects
 - (5-10 in Norway)
 - PDA
 - Mobile phones
 - PC Tablets
- Projects
 - Local Enthusiast
 - Commercial
 - Organisation
- Databases
 - Procedures
 - Medication
- Documentation
 - e Patient Records
 - e Order & Reply
- Communication/collaboration
 - Telemedicine
 - Emergency
 - Lab
- “Paperless Hospitals”

Projects

- Secure communication: MUNIN project (Thales)
- Telenor: Pre-UMTS network in Alta, homecare nursing
- RiT2000: New hospital in Trondheim
- Finland: Access to radiology via Nokia Communicator
- Emergency Medicine: Logistics, resource management, overview of scene, medical info (ECG, Identity, etc.)
- Marine Telemedicine: WLAN+mobile computers on boat, Satellite WAN
